Biographical/Historical note

Rockefeller Foundation diaries:

Officers of the Rockefeller Foundation in New York and its staff members in the field often visited educational, scientific and research institutions and laboratories in many parts of the world to maintain contacts and assess work being done. Officers and field staff frequently conferred with government officials regarding the operation of the RF's programs. In order to preserve accurate records for the guidance of other RF officers, those who carried on these activities kept diaries of their day-to-day contacts and impressions. These diaries were sent to the RF office, where they circulated among officers and staff to the extent deemed advisable.

Rockefeller Foundation:

The Rockefeller Foundation was established by act of the New York State Legislature approved by the Governor on May 14, 1913, "to promote the well-being of mankind throughout the world." Between 1913 and 1928 the China Medical Board, the International Health Board, and the Division of Medical

Education functioned as divisions of the Foundation, concentrating on the administration of programs in public health and medical education. A Division of Studies was created in 1923 to handle projects outside the medical field. These early years were experimental as the new foundation studied the methods of philanthropy and explored its relationships with other Rockefeller boards.

Although the Rockefeller Foundation is the largest and best known philanthropy founded by the Rockefeller family, it was neither the first nor the last to be established. The Rockefeller Institute for Medical Research (1901), the General Education Board (1902), the Rockefeller Sanitary Commission for the Eradication of Hookworm Disease (1909), and the Bureau of Social Hygiene (1911) all existed earlier. When the Foundation was created, the Sanitary Commission was disbanded. After the establishment of the Foundation, the Laura Spelman Rockefeller Memorial (1918) and the International Education Board (1923) were created.

The Rockefeller boards and their programs were reconsidered and reorganized in 1927-1928 in order to avoid overlapping programs. The International Health Board of the Foundation was disbanded and an International Health Division was organized. The China Medical Board, Inc., was established as a separately incorporated institution, and the China Medical Board of the Foundation ceased to exist. The Division of Studies was dropped and the Division of Medical Education was phased out. The Laura Spelman Rockefeller Memorial was combined with the Foundation and the Spelman Fund of New York was chartered to continue activities of the LSRM that were not absorbed by the Foundation. The International Education Board was disbanded.

As a result of this reorganization, the Foundation adopted a program which included public health work (administered by the IHD), the advancement of knowledge in the medical and natural sciences (in part taken over from the IEB), the social sciences (formerly the field of the LSRM), and the humanities and arts (shared with the GEB). The Rockefeller Institute and the Bureau of Social Hygiene were not affected by the reorganization. The program adopted by the Foundation at this time remained basically the same for the next twenty years.

As its files accumulated, the Foundation maintained a card index recording the names of institutional and individual grantees and correspondents. A microfilm copy of this index is available at the Archive Center.

Scope and Contents note

Rockefeller Foundation officers' diaries:

Diaries are of two types: regular daily diaries, and special trip diaries. Some diaries have indexes, which are bound in the annual volume; indexing was not a requirement but was left to the discretion of the officers, and not all diaries are indexed.

Diaries frequently contain information given in confidence, and were thus treated as confidential., The period covered is approximately 1911-1992.

Conditions Governing Access note

Officers' diaries are open for scholarly research provided that (1) the diarist is deceased and (2) the volume to be examined is at least twenty years old. All reasonable efforts will be made to determine the fate of the diarist(s), but if such efforts are fruitless then the material will remain closed to scholarly research until 100 years after the officer's year of birth.

Stevens, David H.**Biographical/Historical note**

David H. Stevens was an influential staff member of the General Education Board (GEB) and Rockefeller Foundation's (RF) Division of the Humanities.

Born in Wisconsin in 1884, Stevens earned a B.A. (1906) and an M.A. (1910) from Lawrence University. He taught briefly at Northwestern University before moving on to earn an M.A. from Harvard University in 1912 and a Ph.D. in English from the University of Chicago in 1914.

Following the completion of his doctorate, Stevens remained at the University of Chicago, rising through the ranks of the English department to become a full professor in 1925. He was also active in University administration, holding positions as Dean of the College of Arts, Literature and Science from 1920 to 1922 and Associate Dean of Faculties in 1929. His academic career was briefly interrupted in 1918 when he served in the Intelligence Division of the U.S. Army during World War I.

In 1930 Stevens left the University of Chicago to join the GEB as vice president, a post he held until 1938. He helped to expand the work of the GEB into the northern states during the Great Depression. In 1932 Stevens took on perhaps his most important position when he was named Director of the Humanities Division of the RF. As the first full-time director, Stevens had a huge impact in shaping the direction of the humanities program of the RF. His seventeen-year tenure saw the foundation undertaking new initiatives in the fields of drama, radio, film, linguistics, literature and history. Stevens and his associate, John Marshall, moved the RF away from its funding of classical studies and archaeology, refocusing the Foundation's efforts on creative fields and international cultural exchanges.

Following his retirement in 1949, Stevens returned to scholarly pursuits as a research associate at the Huntington Library in San Marino, California. Stevens died in California in 1980 at the age of 95. His passion for the humanities was evident through a life's work that helped to shape the field and the broader cultural life of the United States.

David H. Stevens recounted his career in Robert E. Gard's *A Time of Humanities; An Oral History: Recollections of David H. Stevens as Director in The Division of the Humanities, Rockefeller Foundation, 1930-50*.

Physical Characteristics and Technical Requirements note

The archival material has been reformatted. Access to the original archival material is restricted. Digital files and user copies of the microfilm are available for scholarly access.

Thompson, Kenneth W.

Biographical / Historical

Kenneth Winfred Thompson was a pioneering international relations scholar with a long and varied career in philanthropy and higher education. He spent more than two decades working for the Rockefeller Foundation (RF), rising through the ranks of the Social Sciences Division and into the role of vice president.

Thompson was born on August 29, 1921, in Des Moines, Iowa. He completed his B.A. in history (1943) at Augustana College in Sioux Falls, South Dakota, and served in the U.S. Army in infantry and military intelligence during World War II. He went on to earn his M.A. (1948) and Ph.D. (1950) in political science and international relations at the University of Chicago.

Thompson began his career in academia, first as an Assistant Professor of Political Science at the University of Chicago, and then as an Associate Professor and Chairman of the International Relations Committee at Northwestern University. He began working for the Rockefeller Foundation in 1953 as a consultant in International Relations, and left his position at Northwestern University in 1955 to become the Foundation's assistant director for Social Sciences. He quickly earned promotions within the RF, becoming associate director for Social Sciences in 1957, director of Social Sciences in 1960, and vice president in 1961.

As a scholar, Thompson was an influential theorist of international relations; as a Rockefeller Foundation officer, he worked tirelessly to foster the development of the international relations discipline. Thompson organized and nurtured the Foundation's International Relations Program (IRP), which began informally in 1955 with grants-in-aid for early career scholars in the emerging discipline. With Thompson's persistence, the program was formally established in December 1960 to provide grants to individual scholars researching foreign policy, diplomatic history, and international relations theory. The IRP was modeled on an earlier Foundation initiative, the Legal and Political Philosophy (LAPP) program. As with the IRP, Thompson's ability to foster and promote exciting new scholarship played a critical role in the LAPP program's success. Notable grantees included Hannah Arendt, Zbigniew Brzezinski, George F. Kennan, John Rawls, H. J. Morgenthau, Leo Strauss, and Reinhold Niebuhr.

Thompson remained an active scholar during his years at the Rockefeller Foundation. He held endowed lectureships at New York City's Riverside Church (1958), Duke University (1959), and New York University (1962), and authored several books including *Christian Ethics and the Dilemmas of Foreign Policy* (1959), *Political Realism and the Crisis of World Politics* (1960), *American Diplomacy and Emergent Patterns* (1962), and *The Moral Issue in Statecraft* (1966). A 1961 Rockefeller Foundation profile observed that Thompson "continued his work in the field

as a scholar and speaker at a rate that, even by those whose only profession is scholarship, must be considered just slightly this side of awesome."

Thompson is perhaps best known for the third phase of his career, after leaving the RF in 1974. Thompson resumed his academic career as a professor of government and foreign affairs at the University of Virginia. In 1978, he became Director of UVA's Miller Center of Public Affairs, a nonpartisan institute devoted to the study of the presidency and political history. He played an integral role in creating the Center's Presidential Oral History Program and the Forum Program speaker series, and he held this position until his retirement in 1998. Over the course of his career, Thompson wrote and edited more than forty books and countless articles about international relations, foreign policy, diplomacy, and presidential history.

Kenneth Thompson died in February 2013 at the age of 91.

Vincent, George E.

Biographical/Historical note

George E. Vincent, second president of the Rockefeller Foundation (RF), was born in 1864 in Rockford, Illinois.

He received his B.A. from Yale University in 1885. Following graduation, he worked for the Chautauqua Institution which provided flexible adult education courses and home study programs for adults. The Chautauqua movement was initiated in New York by George Vincent's father, Methodist Bishop John H. Vincent.

In 1892 Vincent began work as a graduate student in the sociology department at the University of Chicago. While there, he and department chair, Albion Small co-authored Introduction to the Study of Sociology, the first sociology textbook to be published in the U.S. Vincent completed his dissertation, "Social Mind and Education," and received his Ph.D. in 1896. He remained at the University of Chicago as a teaching fellow and attained a full professorship in sociology in 1904. He later served as dean of the Junior College and the College of Arts, Literature and Sciences.

In 1911 Vincent accepted a position as president of the University of Minnesota, where he spent the next six years cementing the University's reputation as a major research institution. Vincent also created the University's Extension Division for adult education and helped to create a partnership between the medical school and the Mayo Foundation.

In 1917 Vincent was named president of the RF, a post he held for twelve years. As president he supported the continued expansion of the RF's public health activities, including the creation of the RF's Division of Medical Education, which was responsible for improving medical education outside of the U.S. Vincent also initiated programs in the natural sciences and oversaw a major reorganization of the Foundation into five divisions in 1928. In addition to his role as RF President and Trustee, Vincent was a member of the General Education Board (GEB), Peking Union Medical College (PUMC) and the China Medical Board (CMB).

Throughout his career Vincent remained a member of the American Sociological Society, which he helped found in 1895, and also contributed his time as an editor of the American Journal of Sociology.

George E. Vincent passed away in February of 1941 after a lifetime of influential work in the fields of education, sociology, and philanthropy.

Physical Characteristics and Technical Requirements note

Walker, Sydnor H.

Biographical/Historical note

Sydnor H. Walker worked with the Laura Spelman Rockefeller Memorial (LSRM) and the Rockefeller Foundation's (RF) Division of the Social Sciences, helping to shape research in the social sciences over the course of two decades.

Walker was born in Louisville, Kentucky, in 1891. She received an A.B. in economics from Vassar College in 1913 and an M.A. from the University of Southern California in 1917.

She returned to Vassar in 1917, where she served as an instructor in economics. A colleague commented that Walker was appreciated by the students for "her quick wit and gaiety...although she could be sharply critical of the careless and the dilatory." [1] In 1919 Walker left her teaching position to join an industrial relations consulting firm headed by Beardsley Ruml. She subsequently went abroad to Vienna and Russia to aid in European relief with the American Friends Service Committee.

Upon her return to the U.S. in 1924, Walker was recruited by Ruml to work for the LSRM as a research associate. She was a staunch advocate of using scientific and standardized methods to conduct research in the social sciences. While working for the LSRM, Walker continued her studies at Columbia University, receiving her Ph.D. in economics in 1928. Her dissertation, "Social Work and the Training of Social Workers," was published by the University of North Carolina Press in 1928.

When many of LSRM's programs were consolidated with the RF in 1929 and a new Division of the Social Sciences created, Walker became Assistant Director of the division. She was promoted to Associate Director in 1933 and

Acting Director in 1937. Among her interests at the RF, she was a proponent of improving the teaching of social work and the administration of social welfare programs. Her grant-making extended to many southern universities. She also contributed to the development of the social sciences outside the U.S., working with grantees in Europe and Latin America.

Resigning from the RF in 1943 for health reasons, she worked on a report for the Woodrow Wilson Foundation, "The First Hundred Days of the Atomic Age," which was published in 1945.

She served as a trustee for Vassar College from 1939-1943 and was appointed assistant to the president of Vassar College in 1948, a position she held until 1957.

Sydnor H. Walker passed away in 1966.

box 489

This diary records Ms. Walker's meetings and interviews between January 24 and November 15, 1935 with social science researchers and social work experts in the United States and abroad. Ms. Walker's diary references current social science programs in the United States receiving Rockefeller Foundation support. Ms. Walker's diary is also a record of requests made for monetary support for social work and social science research projects, and provides details about the universities and institutions requesting support as well as the nature of their projects.

1936

box 489

Scope and Contents note

reel M Wal 1 frame 554

This diary records Ms. Walker's meetings and interviews between January 14 and November 5, 1936 with social science researchers and social work experts in the United States and abroad. A large portion of Ms. Walker's diary is devoted to describing the status of the deposed German refugee scholars program and its progress in finding placements for German scholars in American universities. Ms. Walker's diary is also a record of requests made for monetary support for social work and social science research projects, and provides details about the universities and institutions requesting support as well as the nature of their projects. One particularly prominent request in the diary is from McGill University in Montreal, which the Rockefeller Foundation had been providing significant support to since the early 1920s. The entry on McGill provides a noticeable contrast between a heavily Rockefeller-funded institution in Canada and other RF-funded institutions in the US and

abroad in terms of the structure and method of social science research, as well as the fiscal responsibility of the university.

Weaver, Warren

Biographical/Historical note

In his nearly three decades of leadership of the natural sciences at the Rockefeller Foundation (RF), Warren Weaver contributed substantially to the mid-century revolution in biology and agricultural science. Over a lifetime dedicated to building bridges across the sciences, he also contributed significantly to mathematics, statistics, physics, computer science, and scientific associations.

Warren Weaver was born in Reedsburg, Wisconsin in 1894. He received his B.A. and Ph.D., as well as a Certificate of Engineering, from the University of Wisconsin. He served in the Army in World War I and taught mathematics at Throop College of Technology (now the California Institute of Technology) until 1920. Later that year, at the request of his mentor, physics professor Max Mason, Weaver joined the mathematics department at University of Wisconsin and chaired the department from 1928 – 1932. Together, in 1929, Mason and Weaver wrote the classic physics textbook, *The Electromagnetic Field*.

In 1932, Mason, now president of the RF, persuaded Weaver to lead the Foundation's programs in natural sciences. Weaver's insight and intellectual risktaking led him to focus funding on scientific endeavors at early stages of development. With support from the Foundation, he developed a new program in experimental biology. At the same time, he identified opportunities for interdisciplinary work across the biological and physical sciences that resulted in the new field of molecular biology (which Weaver named).

On leave to serve in the Air Force in World War II, Weaver organized the fire-control section of the National Defense Research Committee. A singularly important development, resulting from collaboration with Bell Telephone Laboratories, was the electrical anti-aircraft device. Weaver then organized the Applied Mathematics Panel where interdisciplinary teams of mathematicians, economists and statisticians developed innovative techniques in sequential analysis and operations research.

Having returned to the RF after the war, Weaver contributed to the development and expansion of the "Green Revolution" when agriculture was added to his portfolio in 1950. RF's agriculture programs not only supported breakthrough research on new, more productive varieties of corn, wheat and rice, they also contributed to training and institutional development, elements that Weaver knew were critical for ensuring long term success.

In 1954, he became Vice President for Natural and Medical Sciences. Upon retiring from the RF five years later, he served as vice president of the Alfred P Sloan Foundation from 1959 to 1964 and trustee from 1956-1964.

Outside his foundation work, Weaver served on the genetics panel for the National Academy of Sciences, authoring a pioneering report on the biological effects of radiation. He was elected a fellow of the American Association for the Advancement of Science in 1928 and president in 1954. He was also a trustee and board chair of the Salk Institute for Biological Studies.

In 1963, his passion for probability led him to publish a book for the non-mathematical public, *Lady Luck: The Theory of Probability*. An aficionado of Lewis Carroll, Weaver published in 1964, *Alice in Many Tongues*, explaining the challenges of translating *Alice in Wonderland* into nearly 40 languages.

In recognition of Warren Weaver's extraordinary contributions to the Rockefeller Foundation and to the pursuit of science, in 1989, the Foundation instituted the Warren Weaver Fellows Program. The fellows have been talented individuals who, during one-year residencies, have contributed fresh perspectives on the Foundation's work in specific program areas.

Warren Weaver died in 1978 at the age of 84 in New Milford, Connecticut.

Physical Characteristics and Technical Requirements note

Wellhausen, Edwin J.

Biographical/Historical note

In his four decades with the Rockefeller Foundation (RF) from 1943 to 1983, Edwin Wellhausen played a central role in the Foundation's agricultural work in Mexico and in international agricultural development more broadly. Wellhausen's distinguished career included leading both the Mexican Agricultural Program (MAP) and the International Maize and Wheat Improvement Center in Mexico (known by its Spanish acronym, CIMMYT).

Wellhausen was born on September 10, 1907 in Fairfax, Oklahoma. He earned his B.S. in plant pathology from University of Idaho (1932), and his Ph.D. in genetics and plant breeding from Iowa State University (1936). After completing his doctorate, Wellhausen was a General Education Board Fellow at the Rockefeller Institute for Medical Research and the Department of Physiology at the University of California, Berkeley, and then worked briefly for Agricultural Experiment Stations at Montana State College and West Virginia University.

In 1943, Mexican Agricultural Program Local Director (and future RF President) J. George Harrar selected Wellhausen to head the MAP's corn breeding efforts. Because corn was integral to the Mexican diet, his work focused on both boosting corn yields and developing hybrids that would improve Mexico's long-term corn production. After a decade leading the corn breeding program, Wellhausen succeeded Harrar as MAP Local Director, and held the position until 1958.

Wellhausen worked tirelessly to foster international cooperation toward the improvement of agricultural research and production. From 1959-1963, he was Director of the Inter-American Maize Improvement Program, which led to the establishment in 1963 of the International Maize and Wheat Improvement Center in Mexico (CIMMYT), headquartered in Mexico City. Wellhausen served as CIMMYT's first Director General.

Wellhausen retired in June 1973, but spent the next decade as a Special Field Staff Member working on a variety of RF Latin American assignments. He continued to foster the development of international research institutes, counseled international governments and agricultural institutions, and consulted for the International Agricultural Development Service (IADS). He retired fully from the Rockefeller Foundation in 1983, when the Foundation closed its Mexico field office.

Over the course of his career, Wellhausen published dozens of articles about corn production, developed more than 60 hybrids and varieties of corn, and trained Latin American agronomists in the breeding and production of the crop. He received several awards and honors from the international community in recognition of his efforts. In 1969, the Mexican government awarded him the Order of the Aztec Eagle, First Class, the highest decoration granted to foreigners.

Edwin Wellhausen died on January 7, 2001.

<u>Physical Description:</u> 132 Pages	box 523
<u>Digital Object:</u> 1939-1941: 1939-1941	

Scope and Contents note

Organized according to interview, this diary spans two years of Willits time spent as Director of Social Sciences of the Rockefeller Foundation. The interviews are with various professionals in the field and the topics of conversation include discussions of various projects, grant proposals and fellowships that RF may contribute resources towards. Some of the topics discussed in the journal include implications of war funding, unemployment, labor studies, urban decay, agricultural science, impact of technology and public administration.

1944-1946	box 523
<u>Digital Object:</u> 1944-1946: 1944-1946	reel M Wil 1 frame 107

Scope and Content note

Organized according to interview and visit, Willits goes to the Southern United States to survey various southern schools. He interviews members of the college faculty and determines which departments are the strongest. The schools surveyed include University of Virginia, University of North Carolina, Duke University, North Carolina State College and North Carolina College for Negroes. Topics covered in this diary include rural poverty, black studies, populations, and World War II. Included in the diary are copies of

"Subject Index to Joseph H. Willits ' Dixie Diary", "Racial Relationships in North Carolina", "Farm Labor Shortages and Maximum Production", "Agricultural Interests of Nonfarm Rural Leaders", "Twenty Years of Migration From Farms" and "Rural Industrialization Creates New Problems".
