## Biographical / Historical

---

Donald Redfield Griffin (August 3, 1915 - November 7, 2003)

Donald Redfield Griffin was born in Southampton, Long Island, New York, the only child of Henry Ferrand Griffin and Mary Whitney Redfield Griffin. He attended Phillips Academy in Andover, Massachusetts, and subsequently earned Bachelor of Science (1938), Master's (1940), and Ph. D (1942) degrees from Harvard University. He married twice – to Ruth Castle in 1941 and to Jocelyn Crane (also a scientist) in December 1965. He had four children: Nancy, Janet, and twins Margaret and John. His hobby was sailing. Donald Griffin died November 7, 2003 in Lexington, Massachusetts.

While still in high school, Griffin began an extensive project banding bats in the American Northeast, enlisting friends and area residents to help, and banding over 16,000 bats between 1935 and 1938. (Carolyn A. Ristau, "Donald Redfield Griffin," *Proceedings of the American Philosophical Society*, Vol. 149, No. 3 (September 2005), p. 404.). Bat banding continued over the years, although less intensively. Some banding activities were based at Woods Hole Oceanographic Institution in Massachusetts where his uncle, Alfred C. Redfield, was affiliated (later Associate Director). Redfield was also chairman of Harvard's Division of Biology and was a significant influence on his nephew. Scientific interests ran in the Redfield family. Griffin's great-great grandfather was the first president of the American Association for the Advancement of Science; his great-grandfather was a botanist, and his grandfather was a nature photographer. (Roger Revelle, "Alfred C. Redfield: A Biographical Memoir," Washington, D.C.: National Academy of Sciences, 1995, p. 315.).

**Career** Although known primarily for studying bats, Griffin also researched bird navigation and orientation as well as animal thinking and behavior. While a student, Griffin learned to fly a plane and followed birds in order to better understand their navigation and homing techniques. In the 1930s, some of his bird observation work was conducted from Bowdoin Scientific Station on Kent Island in the Bay of Fundy, New Brunswick. In 1939, he received a summer fellowship at the Huyck Preserve in Rensselaerville, New York and later published journal articles based on his bat banding and research there. Also from the 1930s and into the 1950s, he banded and observed birds in connection with the O. L. Austin Ornithological Research Station in Wellfleet, Massachusetts.

After earning his doctorate, Griffin continued at Harvard as a Junior Fellow, teaching assistant in biology, and research associate in Harvard's Psycho-Acoustic Fatigue Laboratory which had United States military contracts to research ways of improving clothing for cold weather use, among other projects. Part of his government-funded work during the war related to communication equipment research and physiological optics.

In the summer of 1946, Griffin was appointed professor of zoology at Cornell University in Ithaca, New York. While there, he continued pursuing his special interests outside of the university laboratory. In addition to Cornell studies of birds on Bonaventure Island (Quebec, Canada), and Caribou, Maine, he and colleagues took trips to the Bowdoin Scientific Station's Kent Island facility in the Bay of Fundy, New Brunswick, Canada where they studied bird orientation and navigation. In 1952-53, Griffin, accompanied by photographer Dr. Guillermo Zuloaga of Creole Petroleum, studied acoustic orientation of oil birds in Venezuela.

Although Griffin's post-war research from 1947 through 1953 focused more on bird migration patterns, the use of radioactive isotopes in bird tracking, and the physiology of orientation than on bats, he also explored fish hearing and bat radar. Much of his research was conducted for the U.S. Office of Naval Research, primarily in summers, at the Arctic Research Laboratory in Point Barrow, Alaska, and for the Air Force's Arctic Aeromedical Laboratory at Ladd Air Force Base in Fairbanks, Alaska. His Air Force projects in Alaska included investigating the insulating qualities of small mammals' fur.

He returned to Harvard University as professor of zoology in fall 1953 where he was Chairman of the Biology Department 1962-1965. During his time at Harvard, he resumed his studies into bats' use of echolocation, the word coined by him, to determine the size, distance, and location of objects including prey. Outside of his university laboratory, Griffin continued independent research into bat navigation and bird orientation, often at Woods Hole Oceanographic Institution.

In the summer of 1965 he moved to Rockefeller Institute (now University) in New York City and served as their Director of the Institute of Research in Animal Behavior until 1969. His professorship at Rockefeller University was concurrent with a Fellowship from New York Zoological Society. A major project of the NYZS involved periodic visits to the Beebe Tropical Research Station in Simla, Trinidad studying bat visual detection and echolocation and abilities of fish-catching bats. During the late 1960's and 1970's Griffin returned to studies of birds' ability to navigate in clouds when neither the sky nor ground was visible to them for orientation. In his later years at Rockefeller University, he spent more time concentrating on animal cognition and communication.

He retired from Rockefeller University in 1986, and was emeritus professor of animal behavior until his death. In retirement, he continued to research and write, and was an Associate of Zoology with Harvard's Concord Field Station of the Museum of Comparative Zoology.

Honors In 1952 Griffin was elected a Fellow of the American Academy of Arts and Sciences. He was also a fellow of the Animal Behavior Society and a Scientific Fellow of the New York Zoological Society. In December 1978, Griffin became President of the Harry Frank Guggenheim Foundation, and continued for four years. His professional organization affiliations included the American Academy of Arts and Sciences, American Ornithologists Union, American Philosophical Society, American Physiological Society, American Society of Mammalogists, and National Academy of Sciences

Publications Griffin published many articles and books, including *Listening in the Dark* (1958) for which he was awarded the Daniel Giraud Elliot Medal from the National Academy of Sciences; *Echoes of Bats and Men* (1959); *Animal Structure and Function* (1962); *Bird Migration* (1964) for which he won the Phi Beta Kappa Science Prize; *The Question of Animal Awareness: Evolutionary Continuity of Mental Experience* (1976, revised edition 1981), *Animal Thinking* (1984), and *Animal Minds: Beyond Cognition to Consciousness* (1992) .

Scientific Significance In a January 16, 1954 letter to *Scientific American*, Griffin wrote, "The bulk of my research work has centered around the sensory physiology of animal orientation, and this interest grew out of boyhood leanings towards natural history." As a Harvard undergraduate, he and Robert Galambos began monitoring and recording bat sounds using technology developed by physicist G. W. Pierce and methods of Hallowell Davis. This research led to an understanding of echolocation—the term Griffin coined in 1944 to describe bats' ability to navigate around obstacles by using supersonic sounds and the feedback from those. Griffin banded bats into the 1950s which led to new discoveries in bat longevity and migration. He used kite-balloons and planes to study bat and bird navigation. His research into the acoustic orientation of bats was eventually useful in developing aids for blind people. After decades of studying animal navigation, primarily in bats and birds, in the 1970s he began to explore animal thought processes. His pioneering studies on animal communication, behavior in natural circumstances, and learning contributed to the new field of cognitive ethology—the ability of animals to consciously use sophisticated thinking and reasoning in interactions with their environment, humans, and other animals.

## Scope and Contents

---

The majority of the material in this collection is related to Griffin's work as a scientist between the years 1930-1986 and consists of correspondence, records of project activities, lab books, and publications. Some correspondence is in foreign languages, including French, German, and Spanish.

Items of special interest include:

Correspondence with Paul Ehrlich, author of "The Population Bomb";

Correspondence with psychologist B. F. Skinner;

Correspondence with Nobel Prize co-recipients Karl Von Frisch, Konrad Lorenz, and Nikolaas Tinbergen;

A letter to Senator McMahon concerning the use of Atomic material and Manhattan Project;

Support for a fellow scientist, Marcus Singer, under investigation by the U.S. House of Representatives Committee on Un-American Activities;

Correspondence with various manufacturers and scientists about development of specialized equipment--including early computers--to study, record, and film aspects of Griffin's research.

Acronym Key IRAB: Institute of Research in Animal Behavior (RU). NYZS: New York Zoological Society. RU: Rockefeller University. WHOI: Woods Hole Oceanographic Institution.

### Publication Statement

Rockefeller Archive Center

15 Dayton Avenue

Sleepy Hollow 10591

[archive@rockarch.org](mailto:archive@rockarch.org)

URL: <http://www.rockarch.org>

### Conditions Governing Use

The Rockefeller Archive Center has legal title, copyright and literary property right to the collection.

### Conditions Governing Access

Collection is open for scholarly research, with select materials restricted.

RAC is unable to provide access to obsolete media. When feasible, a digital surrogate may be created via special order. All applicable charges will apply.

### Processing Information

The collection was partially processed by Alexandra Ward, Rockefeller Archive Center summer intern, August 2012, and Nancy Adgent, RAC archivist, completed advanced processing and finding aid preparation August 2015.

### Immediate Source of Acquisition

Material was donated by the family of Donald R. Griffin, and accessioned by RAC as 1990:008.

## Collection Inventory

---

### Correspondence

#### Scope and Contents

Items include letters to and from other scientists, colleagues, and friends; questions from the general public; requests for peer review of articles; and a few letters from family members. Correspondence with former students and fellow scientists often includes tidbits regarding experiments or projects as well as shared findings. Subject matter ranges from atomic bombs to animal pathology and psychological abilities to employment recommendations for former students and colleagues. A few candid photographs and machine print outs were attached to correspondence and have been left with the correspondence rather than separating such a small number of items and possibly losing valuable context.

#### Arrangement

## Projects

### Arrangement

Alphabetical by name of project.

### Scope and Contents

Series 2 contains correspondence regarding projects not part of routine work at Cornell, Harvard, or Rockefeller University that have a sufficient quantity of pertinent documents to warrant separation.

#### Adams Bat Bomb -

In 1942, while a research associate at Harvard, Griffin conducted preliminary research to determine the viability of using bats to carry small bombs. Although he concluded that the project was not feasible, the idea's promoter, Lytle Adams, continued to pursue his proposal and the concept gained considerable public attention.

#### Arctic Aeromedical Laboratory -

During the winters of 1950-51, 1951-52, and 1952-53, Griffin and his assistants studied effects of wind on insulation of fur in animals, gastro-intestinal tract heat production, and other aspects relevant to man's ability to survive in cold temperatures. Research was conducted under Air Force contract AF 33(038)-12764, at Ladd Air Force Base, Fairbanks, Alaska.

#### Arctic Research Laboratory/Arctic Institute of North America -

In the summer of 1947 and 1948, Griffin conducted homing experiments studying bird orientation and sensory physiology. Work was funded by the U.S. Office of Naval Research and based at Point Barrow, Alaska.

#### Alpha Helix Expedition -

In the summer of 1969, Griffin began a four-month trip to New Guinea on the vessel Alpha Helix (owned by Scripps Institution of Oceanography) where he studied bats and cave swiftlets. The expedition was operated by the University of California with funding from the National Science Foundation. Griffin was in the crew headed by George Bartholomew that included fellow scientists Jocelyn Crane (Griffin's wife), Jared Diamond of UCLA, Alan Grinnell of UCLA, Susumu Hagiwara, Bodil Schmidt-Nielsen, and Hobart van Deusen.

#### Austin Ornithological Research Station -

Over the course of several years beginning in 1933 and extending into the mid-1950s, Griffin banded birds, primarily terns and herring gulls, on Penikese Island, Massachusetts observing obstacle avoidance and homing instincts. The studies were done in conjunction with Griffin's university affiliations and Woods Hole Marine Biological Laboratory.

#### Bat Banding -

Griffin began banding bats while a high school student and continued for at least two decades, finding colonies in mines and caves throughout the Northeast and in Kentucky, Ohio, Pennsylvania, and Canada. Data about banded bats was still being returned as late as 1956 and informed new understanding of bat longevity, hibernation, and migration. Some of the banding activities were conducted in connection with Woods Hole Oceanographic Institution and correspondence about that work is included in the Bat Banding project folder.

#### Beebe Tropical Research Station -

Between July 1960 and August 1969, Griffin made several trips to the Beebe Tropical Research Station in Simla, Trinidad studying bat visual detection and echolocation and fish-catching bat abilities. The Station was operated jointly with the New York Zoological Society and some of the research was funded by the National Science Foundation. Griffin's wife, Jocelyn Crane, conducted research into fiddler crab behavior there. Griffin and Crane shared responsibility for the facility's scientific work.

#### Bowdoin Scientific Station -

Beginning in the 1930s and continuing into the 1950s, Griffin and colleagues took trips to the Bowdoin Scientific Station's Kent Island facility in the Bay of Fundy, New Brunswick, Canada where they studied bird homing and navigation, especially in petrels and gannets.

## Chillagoe Expedition -

In summer 1980, Griffin was one of several international scientists in the Chillagoe Expedition, a U. S. National Science Foundation sponsored trip to Queensland, Australia for the study of sensory physiology and perception in bats, bowerbirds, and cave swiftlets.

## Huyck Preserve -

In 1939, Griffin received a summer fellowship at the Edmund Niles Huyck Preserve in Rensselaerville, New York, and later published journal articles based on his bat banding and research there.

## Panama -

In the spring of 1953, Griffin and a Harvard student, Prentice Bloedel ("Pen") spent two months researching and filming tropical fish-catching bats in Panama. Bloedel continued for a few more months. Griffin's former student, Harold Trapido with the Gorgas Memorial Laboratory in Panama was a key contact for the project. Griffin periodically imported bats from there and some of his students visited to research. The U.S. Office of Naval Research sponsored some of Griffin's work in the Canal Zone.

## Woods Hole Oceanographic Institution -

Beginning as early as 1945 and extending into the 1970s, Griffin conducted independent research, usually during summers, at Woods Hole investigating a variety of topics including bat navigation, bird orientation, and radar tracking. The U.S. Office of Naval Research supported Griffin's research on bat radar in the summer of 1953 and a few years earlier when he investigated fish hearing. Correspondence about bat banding and monitoring activities based from Woods Hole is included in the Bat Banding project folder. Although not connected to a specific project, correspondence related to Griffin's service as an Associate in Physiology of the WHOI is included in this folder.

## Lab Books

### Arrangement

Lab books are arranged in numerical order when numbers were shown; otherwise, books are in chronological order with the oldest date first. Oversize files are physically arranged together in a dedicated box.

### Scope and Contents

Lab Books are handwritten records of scientific observations and experiments and often include machine printouts and photographs showing results of particular tests. In addition to lab books kept as part of routine work at Cornell, Harvard, and Rockefeller Universities, some are for separate projects including the Alpha Helix Expedition and Beebe Tropical Research Station. Some books are titled with brief descriptions of their contents: jamming experiments, underwater sound, bats hitting targets, wind tunnel experiments, human echolocation, ground echolocation, and grid echoes.

Books kept by laboratory assistants are included and their names are shown when indicated on the book covers. Abbreviated descriptions of contents are shown in the box/folder listing as written on the front of lab books. Some lab books include typewritten summaries of experiments that appear to be drafts for publication. A few have pages inserted with later dates that appear to be reviews of earlier work. Photographs and machine printouts remain with the original lab books in order to preserve valuable context.

A handwritten note in file shows "Loaned to Nigel V. Woolf Cornell Notebooks 20, 21, 23" and those notebooks are not included in this collection. Numbers 19, 25, and 41-50 are also missing. It is possible that some of the unnumbered ones were intended to have the missing numbers.

## Publications

## Scope and Contents

Series 4 includes newspaper and magazine clippings as well as scientific reprints and other publications by Griffin and fellow scientists. The Newspaper and Magazine articles folder has an article about Theodore Hammel who worked on the atom bomb in Los Alamos, MN and subsequently changed his graduate studies from physics to physiology as a result of hearing a lecture by Griffin. Newspaper and magazine articles address various aspects of Griffin's work for a general public audience—bat “radar,” animal communication, bat diseases, “bat bomb.” Some have interviews with Griffin, his students, or fellow scientists. A few are clippings of bats in advertisements or comic strips and some articles are in German and Spanish language publications.

A list of Griffin's publications through 1988 is at the front of the first folder of “Articles, Reprints, Reviews-by Griffin.”

This collection does not contain a complete set of all of his publications.

## Arrangement

Newspaper and Magazine Clippings are arranged in chronological order with newest date first. Items with no date are at the end of the folder. Publications by Griffin as author or co-author are in chronological order with newest date first. Publications by others are in alphabetical order by surname of first author.

Title/Description	Instances	
Newspaper and Magazine Articles	box 26	folder 209
Griffin, Animal Thinking	box 27	folder 210

## Scope and Contents

Animal Thinking, Cambridge, MA: Harvard University Press, 1984.

Griffin, The Question of Animal Awareness (First and Second edition.)	box 27	folder 211
---	--------	------------

## Scope and Contents

The Question of Animal Awareness: Evolutionary Continuity of Mental Experience, New York: Rockefeller University Press, 1976.

Griffin and Novick, Animal Structure and Function; Scientific American-Animal Engineering	box 27	folder 212
---	--------	------------

## Scope and Contents

Introduction and "More About Bat 'Radar'" in Readings from Scientific American: Animal Engineering, San Francisco: W. H. Freeman and Co., 1974. Animal Structure and Function, New York: Holt, Rinehart, and Winston Inc., 1970.

Articles, Reprints, Reviews by Griffin, 1980s	box 27	folder 213
---	--------	------------

## Scope and Contents

"Cognitive Aspects of Echolocation" in Animal Sonar, Processes and Performance, New York: Plenum, 1988.

Review of Tactical Deception in Primates, Behavioral and Brain Sciences, 11:233-273, 1988. "Foreword to papers on Magnetic Sensitivity in Birds" in Animal Learning and Behavior, , 1987. Review of The Comparative Psychology of Intelligence, Behavioral and Brain Sciences, 10:645-695, 1987. Foreword in Dolphin Cognition and Behavior: A Comparative Approach, Hillsdale, NJ: L. Erlbaum Assoc., 1986. "Epilogue: The Cognitive Dimensions of Animal Communication" in Experimental Behavioral Ecology and Sociobiology, New York: Springer, 1985. "Recollections of an Experimental Naturalist" in Leaders in the Study of Animal Behavior, Lewisburg, PA: Bucknell University Press, 1985. Animal Consciousness, Neuroscience and Biobehavioral Reviews, 9: 615-622, 1985. Animal Thinking, excerpts , American Scientist, 72:456-464, 1984. Introduction to Animal Mind - Human Mind, Dahlem Workshop Report, Berlin: Springer-Verlag, 1982. Ecology of Migration: Is Magnetic Orientation a Reality?, Quarterly Review of Biology, Vol. 57, No. 3, 1982. High altitude echolocation of Insects by Bats , Behavioral Ecology and Sociobiology, 10:303-306, 1982. Echolocation by Cave Swiftlets, Behavioral Ecology and Sociobiology, 10:119-123, 1982. The Question of Animal Awareness: Evolutionary Continuity of Mental Experience, Los Altos, CA: William Kaufman, Inc., 1981. The Early History of Research on Echolocation in Animal Sonar Systems, New York: Plenum, 1980.
