Biographical / Historical

Max Bergmann was a German biochemist. He was born in Furth, Bavaria on February 12, 1886. After receiving his Ph.D. from the University of Berlin in 1911, he worked closely as an assistant to Hermann Emil Fischer from 1911 to 1919. Together, they laid the foundation for scientific knowledge of proteins, carbohydrates, and tannins. Following the suicide of Fischer, Bergmann accepted a position as Vice-Director and Head of the Department of Organic Chemistry at the Kaiser Wilhelm Institute for Fiber Chemistry in Berlin. In 1921, he moved on to serve as Director of the Kaiser Wilhelm Institute for Leather Research until 1933. When the conditions in Germany grew too hostile, he emigrated to the United States and became an Associate Member of the Rockefeller Institute for Medical Research where he continued as a pioneer of applied sciences focused on proteins and protein-splitting enzymes, as well as the chemistry of carbohydrates and fats. In 1937, he became a full member of the Institute. He died at Mount Sinai Hospital in New York on November 7, 1944. At the time of his death, he was working

under contract with the U.S. Office of Scientific Research and Development to benefit the national defense during World War II. This research focused on the synthetic, analytical, and inorganic problems in chemical warfare and B-4 toxicity, especially mustard gases.

Chronology	
1886	Born February 12, 1886 in Furth, Bavaria.
1907	B.S. from the University of Munich.
1911	Ph.D. from the University of Berlin.
1911–1919	Assistant to Emil Fischer at the University of Berlin.
1915	Son Peter G. Bergmann is born.
1917	Daughter Esther M. Bergmann is born.
1919–1921	Vice-Director and Head of the Department of Organic Chemistry at the Kaiser Wilhelm Institute for Fiber Chemistry in Berlin.
1921–1933	Director of the Kaiser Wilhelm Institute for Leather Research and Honorary Professor for Leather Chemistry and Biochemistry at the Technical Hochschule in Dresden.
1928–1933	Elected President of the International Society of Leather Chemists
1934–1937	Associate Member of the Rockefeller Institute for Medical Research.
1937–1944	Full Member of the Rockefeller Institute for Medical Research.
1940	Becomes a naturalized U.S. citizen May 18, 1940.
1944	Dies November 7, 1944 at Mount Sinai Hospital, New York.

Scope and Contents

This collection primarily documents the laboratory research and administration of biochemist Dr. Max Bergmann during his tenure at the Rockefeller Institute for Medical Research, now the Rockefeller University, from 1934 until his death in 1944. The records are particularly focused on the research he conducted in the 1940s on problems of interest to the U.S. Armed Forces, namely the synthetic, analytical, and inorganic problems in chemical warfare and B-4 toxicity, especially mustard gases. Records consist mostly of laboratory research notes, notes on related scientific literature, research progress reports, correspondence with colleagues and administrative officials, administrative circulars and memoranda, reprints of Bergmann publications, and receipts of classified reports and scientific samples. Research topics of interest include World War II chemical warfare research, Selective Service deferments for scientists, policies and procedures of the Office of Scientific Research and Development and the National Defense Research Committee, and the "brain drain" or significant emigration of scientists and technologists to the United States from Europe as a result of hostile conditions prior to World War II. The collection also contains a minimal amount of biographical material, including Bergmann's personal correspondence, documents relating to Bergmann's funeral, and photographs.

[^ Return to Table of Contents](#)

Arrangement

The collection is arranged in six series: 1) Personal, 2) Laboratory Administration, 3) Research, 4) Publications, 5) Declassified Reports and 6) Lantern Slides. See the individual series descriptions for more details on the contents of each series.

Processing Information

The collection was reviewed by archivist Francis Butkus of the National Archives in 1985. The majority of the collection was then declassified. During archival processing, the remaining classified documents were separated into Box 15 and have since been declassified as of December 28, 2011.

Use the stamped declassified copies in Box 15 for access to these materials. Max Bergmann's physical examination records are closed in accordance with HIPAA regulations.

Immediate Source of Acquisition

Received from the Rockefeller University in 1981.

Conditions Governing Use

Copyright restrictions may apply. All requests for reproduction and use of material require additional forms to be submitted for approval by the Rockefeller Archive Center.

Appraisal

Duplicate reports and circulars were discarded. Also, in cases where preservation photocopies were necessary due to the poor condition of the original document, the original document was discarded.

Conditions Governing Access

Access to this collection is restricted pending permission from Rockefeller University.

Collection Inventory

Personal, 1886–1961 (bulk 1933–1946) (1933-1946)

Physical Description: 0.2 Cubic Feet

Arrangement:

Alphabetical by subject or format.

Summary:

This series consists primarily of Bergmann's correspondence from 1934–1944 documenting his appointment to the Rockefeller Institute of Medical Research (RIMR), arrangements for his arrival in the U.S., efforts to gain immigrant status, retiring allowances, and RIMR administrative matters. Correspondents include Simon Flexner, H. T. Clarke, and J. B. Conant. The series also documents Bergmann's death and his funeral service held at RIMR, including a biographical memoir written by Joseph S. Fruton that was used in the Memorial Minute adopted by the Board of Scientific Directors and a short address delivered by Fruton at the funeral service. Other biographical records consist of copies of documents submitted for naturalization, including Bergmann's birth certificate, prison record, and marriage certificate, all of which are in German. Also included are several photographs of Bergmann, a listing of periodicals and books from Bergmann's library that were made available for purchase by Joseph Fruton

following Bergmann's death, and a copy of the collection description and inventory for the Max Bergmann papers housed at the American Philosophical Society Library.

Laboratory Administration, 1934–1946 (bulk 1941–1944) (1941-1944)

Physical Description: 3.5 Cubic Feet

Arrangement:

This series has been retained in its original order and the original file folder labels were used. Bergmann arranged his folders alphabetically by subject. Within the folders, he roughly arranged his records either in reverse chronological order or by subject depending on the type of document. For instance, the correspondence files tend to be in reverse chronological order, whereas more general files are in alphabetical order by subject, which is usually typed on the right side of the document. His arrangement within folders, however, is not always consistent. The Office Memorandum folders, for instance, combine order by memorandum number within a rough overall alphabetical order. Bergmann also maintained a system of extensive cross-references within these files.

Summary:

This series documents Max Bergmann's administration of his laboratory at Rockefeller University while it was under contract with the U.S. Office of Scientific Research and Development to conduct research of benefit to the national defense during World War II. This research focused on the synthetic, analytical, and inorganic problems in chemical warfare and B-4 toxicity, especially mustard gases. This series consists primarily of correspondence, receipts, and forms tracking the routine exchange and use of scientific reports. Correspondence with other scientists also documents the exchange of samples, as well as directions for specific tests, preparations of samples, and brief discussions of reactions and test results. Also included is a significant amount of correspondence and forms related to the Espionage Act Oaths of Secrecy and Selective Service deferments for the scientists working in Bergmann's laboratory. The Literature files consist of reports and reprints from other scientists, along with Bergmann's handwritten notes about what he read. Also included in this series is an incomplete set of Administrative Circulars and Office Memorandum documenting the policies and procedures of the Office of Scientific Research

and Development and the National Defense Research Committee. The majority of memos are located in Box 5, but some are filed alphabetically by subject throughout the series.

Eight folders in this series have a correlating folder with the same title in series 5: Declassified Reports, the contents of which were declassified by the U.S. Army after this collection was archivally processed. Researchers may wish to review both the folder in this series as well as the one with the same title found in series 5 for a full view of material on a given subject.

Research, 1940–1946

Physical Description: 1.1 Cubic Feet

Arrangement:

Alphabetical by subject or format.

Summary:

This series documents the research Max Bergmann and his scientific staff conducted under contract with the U.S. Office of Scientific Research and Development to benefit the national defense during World War II. This research focused on the synthetic, analytical, and inorganic problems in chemical warfare and B-4 toxicity, especially mustard gases. Records consist primarily of informal and formal progress reports, as well as the laboratory and literature notes of two of Bergmann's key scientific staff members, William H. Stein and Stanford Moore.

Eight folders in this series have a correlating folder with the same title in series 5: Declassified Reports, the contents of which were declassified by the U.S. Army after this collection was archivally processed. Researchers may wish to review both the folder in this series as well as the one with the same title found in series 5 for a full view of material on a given subject.

Publications, 1911–1946

Physical Description: 1 Cubic Feet

Arrangement:

The reprints were maintained in their original order based on sequential numbers assigned to each. This numerical order generally corresponds to chronological order. Several un-numbered reprints dating from 1926 to 1946 that were not incorporated in the original order can be found at the end of the series. The bibliography of his collected papers, reprint index, and reprint lists do not correlate with the order of the reprints and should not be relied upon as an access tool.

Summary:

This series documents the published works of Max Bergmann. It includes a bibliography of his collected papers, a card catalog index of his reprints dating from 1911 to 1926, and two lists of reprints.

Declassified Reports, 1940-1945

Physical Description: 0.4 Cubic Feet

Access::

Access:

Researchers are required to use the stamped declassified photocopies in Box 15. The originals are in Box 16 and are closed.

Summary:

This series contain documents that were declassified by the U.S. Army after this collection was archivally processed. The contents of each folder in series 5 originated from a correlating folder of the same name in either series 2 or series 3. Researchers may wish to review both the folder in this series as well as the one with the same title found in a previous series for a full view of material on a given subject.

Arrangement note:

The folders in series 5 are in the same order as the correlating folders in series 2 and 3.

Title/Description	Instances	
Literature II: A. G. Ogston and R. A. Peters, 1940-1943	box 15	folder 1
