Biographical/Historical note

Rockefeller Foundation diaries:

Officers of the Rockefeller Foundation in New York and its staff members in the field often visited educational, scientific and research institutions and laboratories in many parts of the world to maintain contacts and assess work being done. Officers and field staff frequently conferred with government officials regarding the operation of the RF's programs. In order to preserve accurate records for the guidance of other RF officers, those who carried on these activities kept diaries of their day-to-day contacts and impressions. These diaries were sent to the RF office, where they circulated among officers and staff to the extent deemed advisable.

Rockefeller Foundation:

The Rockefeller Foundation was established by act of the New York State Legislature approved by the Governor on May 14, 1913, "to promote the well-being of mankind throughout the world." Between 1913 and 1928 the China Medical Board, the International Health Board, and the Division of Medical

Education functioned as divisions of the Foundation, concentrating on the administration of programs in public health and medical education. A Division of Studies was created in 1923 to handle projects outside the medical field. These early years were experimental as the new foundation studied the methods of philanthropy and explored its relationships with other Rockefeller boards.

Although the Rockefeller Foundation is the largest and best known philanthropy founded by the Rockefeller family, it was neither the first nor the last to be established. The Rockefeller Institute for Medical Research (1901), the General Education Board (1902), the Rockefeller Sanitary Commission for the Eradication of Hookworm Disease (1909), and the Bureau of Social Hygiene (1911) all existed earlier. When the Foundation was created, the Sanitary Commission was disbanded. After the establishment of the Foundation, the Laura Spelman Rockefeller Memorial (1918) and the International Education Board (1923) were created.

The Rockefeller boards and their programs were reconsidered and reorganized in 1927-1928 in order to avoid overlapping programs. The International Health Board of the Foundation was disbanded and an International Health Division was organized. The China Medical Board, Inc., was established as a separately incorporated institution, and the China Medical Board of the Foundation ceased to exist. The Division of Studies was dropped and the Division of Medical Education was phased out. The Laura Spelman Rockefeller Memorial was combined with the Foundation and the Spelman Fund of New York was chartered to continue activities of the LSRM that were not absorbed by the Foundation. The International Education Board was disbanded.

As a result of this reorganization, the Foundation adopted a program which included public health work (administered by the IHD), the advancement of knowledge in the medical and natural sciences (in part taken over from the IEB), the social sciences (formerly the field of the LSRM), and the humanities and arts (shared with the GEB). The Rockefeller Institute and the Bureau of Social Hygiene were not affected by the reorganization. The program adopted by the Foundation at this time remained basically the same for the next twenty years.

As its files accumulated, the Foundation maintained a card index recording the names of institutional and individual grantees and correspondents. A microfilm copy of this index is available at the Archive Center.

Scope and Contents note

Rockefeller Foundation officers' diaries:

Diaries are of two types: regular daily diaries, and special trip diaries. Some diaries have indexes, which are bound in the annual volume; indexing was not a requirement but was left to the discretion of the officers, and not all diaries are indexed.

Diaries frequently contain information given in confidence, and were thus treated as confidential., The period covered is approximately 1911-1992.

Conditions Governing Access note

Officers' diaries are open for scholarly research provided that (1) the diarist is deceased and (2) the volume to be examined is at least twenty years old. All reasonable efforts will be made to determine the fate of the diarist(s), but if such efforts are fruitless then the material will remain closed to scholarly research until 100 years after the officer's year of birth.

Mann, Albert R.

Biographical/Historical note

Albert R. Mann (1880-1947) studied agriculture at Cornell University, and was graduated in 1904. Mann was appointed Assistant Professor in 1908 at Cornell, Secretary-Editor-Registrar in 1908, Professor of Rural Social Organization in 1915, Acting Dean in 1916, Dean in 1917, and finally Provost in 1931. From 1924-1926 Mann directed the International Education Board's (IEB) program of agricultural education and rehabilitation in Europe. Mann returned to Cornell in 1926, but the IEB program continued by his associate, C. B. Hutchison until conclusion in 1928. In 1936 the General Education Board (GEB) engaged Mann to survey the problems of agricultural colleges in the southern United States, and produced the report "Rural Economic and Social Studies in Southern Institutions". Mann was then appointed Vice President and Director of the GEB in 1937. After retiring from the GEB in 1946, Mann then joined the Natural Sciences Division of the Rockefeller Foundation on a part-time basis, to lead the agricultural program. In the winter of 1946-1947, Mann travelled to Germany to visit universities and research institutions interview former fellows and professors the Foundation had contacts with before World War II, and appraise the educational needs of those centers. Mann died on February 21, 1947 in New York, while returning from Germany. For more information on Mann's career, see the Rockefeller Foundation Trustees Bulletin, March 1947, pages 1-8.

Scope and Contents

Albert R. Mann's logs (diaries) for 1924-1927 are variously titled "Log, Summary of Interviews Inspections, and Other Activities, A.R. Mann, Director of Agricultural Education for Europe, International Education Board, and C.B. Hutchison (his Associate)". Each log focuses on a specific country or region. Logs dating from 1926-1927 are primarily authored by C.B. Hutchison.

Related Materials:

Related Materials

Albert R. Mann's diaries from 1937-1939 and 1943-1946 are found in the General Education Board records (FA058), Series 12: Diaries, box 18-20.

Indexing to Albert R. Mann's logs is provided by the International Education Board records, Albert R. Mann and Harry Luman Russell logs index (FA769).

Marshall, John

Biographical/Historical note

John Marshall (1903-1980) was born in Portland, Maine, completed undergraduate (1925) and graduate (1928) studies, and taught in the English department (1927-1933) at Harvard University. In 1933 he joined the Rockefeller Foundation as Assistant (later Associate) Director of the newly formed Humanities program, and from 1933 to 1940 served as a Director of Education with the General Education Board.

As an officer with the Rockefeller Foundation in a newly formed program, Mr. Marshall explored not only specific projects, but the concept of the humanities as a field. Mr. Marshall developed a concern in promoting world-wide culture, with a special interest in the Near East. The Rockefeller Foundation funding for the arts and humanities from 1933 to 1950 was approximately \$4 million. Between 1951 and 1960, the support increased to \$8.4 million, supporting projects in areas including language, radio, and motion pictures.

Mr. Marshall remained an Associate Director for the Humanities program when appointed as the first director for the newly acquired Villa Serbelloni in Bellagio, Italy, in 1959. The Villa was (and continues to be) used as a retreat for scholars in a variety of disciplines who were working on intensive projects and as a conference center for international meetings focused on significant issues or scientific developments. As director, Marshall worked to develop the direction for the Villa, while maintaining his connections with the European humanities community.

John Marshall was married to Mary Gardner Marshall (1927-1960) and Charlotte Trowbridge Koechl Marshall (1961), and had two children from his first marriage, Mary Elizabeth Scott and Ann (Sister Mary John OSB). He was the author of "Classic Cooking" (1959).

Mr. Marshall retired from the Foundation in 1970 and died in 1980.

Scope and Contents Note

Organized according to interview and visit, Marshall discusses the current state of higher education in the humanities at universities in the United States, Ireland, England, France, and Belgium. He speaks with professors and university librarians on the development of RF programs in classical & modern literature and the education of professional librarians in the United States during the fall of 1933 and early months of 1934. He notes the names of promising graduate students deserving fellowships, as recommended by interviewed faculty members. Marshall also gives a detailed account of a meeting of the American Library Association in Chicago (Oct. 20-22, 1933). Marshall then gives a detailed account his tour of Ireland, England, France, and Belgium during April - June 1934.

Scope and Contents Note

Organized according to interview and visit, Marshall discusses possible projects expanding humanities programs and library collections at universities in the United States. He also gives short biographies of potential RF fellows in these fields. Marshall visits several private high schools in the New York City area, including Bronxville Senior High School (Sept. 20-21, 1934) and the Fieldston School (Oct. 9-10, 1934). He attends several seminars and conferences for professionals in the field of Education. Marshall also tours several colleges and high schools in Ohio and upstate New York (Oct. 22 - Nov. 1, 1934), writes extensively on the courses offered at Sarah Lawrence College (Nov. 13, 1934), and the courses offered at General College, University of Minnesota (Dec. 4-8, 1934), while making a tour of several schools in Minnesota, Iowa, and Missouri.

Scope and Contents Note

Organized according to interview and visit, Marshall discusses the current state of educational broadcasting via radio in the United States. He speaks with professionals in the education departments at NBC, CBS, and RCA, along with academics creating radio programs for these networks. Marshall also speaks with professionals in the field of classical music, and discusses the current state of musical education. Marshall visits several universities and radio broadcasting organizations in the Midwest (April 1935) and discusses the state of educational broadcasting via radio. He then attends a meeting of the Ohio Radio Education Association (May 6-8, 1935) and a meeting of the Federal Communications Commission (May 15-16, 1935). Marshall also visits the Brooklyn Museum (April 11, 1935) and discusses the public educational programs at the

museum. During the summer of 1935 Marshall speaks with professionals and academics in the fields of music, theater, film, literature, and the visual arts, and discusses various projects relating to public education in these fields.

The program is concerned with history, philosophy, linguistics and the arts. Grants are organized into intercultural studies, humanistic research, the arts and special projects. Marshall visits Germany, Austria and Italy. He surveys Rockefeller Foundation interests in German humanities programs and assesses higher education institutions. In Italy at the Villa Serbelloni, he details the European Association of American Studies Conference on Research on the American Image in Europe. The diary also includes summaries of his trips to the Rhineland that focuses on history of the region.

Mason, Max

Biographical/Historical note

Charles Max Mason (commonly known as Max Mason) was born in 1877 in Madison, Wisconsin. A well-regarded mathematician, Mason's eclectic career spanned the fields of teaching, research, university administration and philanthropy.

Mason graduated from the University of Wisconsin-Madison in 1898 before earning his Ph.D. in mathematics from the University of Göttingen in Germany in 1903. Upon his return to the U.S., Mason taught mathematics at both the Massachusetts Institute of Technology and Yale University before becoming a professor of physics at the University of Wisconsin-Madison in 1908.

During World War I Mason took a leave of absence in order to work on the Submarine Committee of the National Research Council (NRC). This work was instrumental in the development of the Mason Hydrophone, a detection device that allowed naval crews to pinpoint the location of German submarines. This research later contributed to the development of sonar detectors in World War II. Following the war, Mason resumed his career at the University of Wisconsin-Madison.

In 1925 Mason was asked to become president of the University of Chicago. He accepted the position but remained there for only three years before becoming the director of the Natural Sciences Division of the Rockefeller Foundation (RF). Mason was quickly promoted, and in 1929 he was named president of the Foundation. At the Foundation Mason's personal interest in behavioral research influenced both the experimental biology program of the Natural Sciences Division and the Medical Sciences Division, where initiatives in psychiatry flourished under his supervision.

In 1936 Mason resigned from the RF and joined the team overseeing the construction of the RF-funded Palomar Observatory in California. This project, completed in 1948, allowed Mason to return to physics. Throughout his life he published a number of articles and books in the fields of mathematics and physics, including *The Electromagnetic Field* (1929), which he co-authored with fellow RF staffer Warren Weaver. Mason was also elected a member of the National Academy of Sciences and the German Mathematical Society.

Following the completion of the observatory, Mason retired to Claremont, California. Max Mason passed away in 1961.

Description

Officers of the Rockefeller Foundation in New York and its staff members in the field often visited educational, scientific and research institutions and laboratories in many parts of the world to maintain contacts and assess work being done. Officers and field staff frequently conferred with government officials regarding the operation of the RF's programs. In order to preserve accurate records for the guidance of other RF officers, those who carried on these activities kept diaries of their day-to-day contacts and impressions. These diaries were sent to the RF office, where they circulated among officers and staff to the extent deemed advisable. Diaries are of two types: regular daily diaries, and special trip diaries. Some diaries have indexes, which are bound in the annual volume; indexing was not a requirement but was left to the discretion of the officers, and not all diaries are indexed.

1930	box 305	
Digital Object: 1930: 1930	reel M Mas 1	frame 171

Scope and Contents note

This diary records Mr. Mason's interviews and travels between January 2 and December 30 1930. The diary shows that he met with and interviewed natural science researchers and university administrators both in the United States and Europe, and coordinated with the Rockefeller Foundation's senior staff to ensure funding of projects to a maximum number of candidates at the earliest part of the Great Depression in the United States. While the depression is never directly referenced, the diary contains a copy of the "New Mexico Tax Bulletin" of 1930, a 23-page report which provided figures, estimates, and conclusions on the size and scope of the state's bonded debt in 1930. On a separate note, more than half the diary appears to be handwritten notes penned (almost illegibly) by Mason spanning several weeks and topics.

Scope and Contents note

Organized according to interview and visit, Miller discusses fellowship opportunities and grants with professionals in the field of natural science. As an Assistant Fellowship Administrator in Europe working from the RF Paris Office, he is involved in the selection of RF fellows. The goal of the Natural Sciences Division is to support fellowships in direct support of special fields of scientific interest. These opportunities would provide extensive training in the disciplines essential to effective research. In 1932, Miller tours and surveys various laboratories and research centers in England, Wales and Germany. The diary includes a table of contents, letters, memorandum and a travel log.

Scope and Contents note

Organized according to interview and visit, Miller discusses projects and research with professionals in the field of natural sciences. He is involved in the progress of Natural Science programs, selection of fellows, and development of new research. The focus of Natural Science research is experimental biology. Miller surveys various laboratories, universities and research centers to assess RF projects. Miller attends Conference to Discuss Plans for Administration of Predoctoral Fellowship in the Natural Sciences under RF Grant to NRC, and Mexican Agriculture Annual Meeting.

Niederhauser, John S.**Biographical/Historical note**

John S. Niederhauser was a renowned plant pathologist who spent nearly three decades working for Rockefeller Foundation (RF) agricultural programs in Mexico. He earned international acclaim (and the nickname "Mr. Potato") for his extensive research, education, and collaboration on potato development programs and global food production challenges.

Niederhauser was born in Seattle, Washington on September 27, 1916. In 1933 he received a scholarship to attend Deep Springs College in California, which featured a three-year program combining traditional academic study and farm labor. After completing his third year at Deep Springs, Niederhauser was eager to travel. He bought a steamship ticket to the Soviet Union and spent the summer working on a collective farm in the Ukrainian countryside. At the invitation of Russian plant geneticist Nikolai Vavilov, Niederhauser spent a year studying at the Timiryazev All-Union Academy for Agricultural Sciences in Moscow before returning to the United States in

the fall of 1936. He finished his undergraduate work at Cornell University in 1939 and went on to earn his Ph.D. in plant pathology from Cornell in 1943.

In 1946, Niederhauser joined the RF's Mexican Agricultural Program (MAP) which focused on improving Mexican agricultural yields. Working under the direction of plant pathologist George Harrar, Niederhauser initially studied diseases in wheat, maize, and beans. He soon narrowed his focus to Mexican potato production.

In 1952, Harrar created a potato production program under Niederhauser's direction. The program sought to increase Mexican potato yields and investigate potato diseases, and was successful on both fronts. Niederhauser discovered that late blight, the potato disease responsible for the Irish potato famine in the 1840s, originated in Mexico. He also determined that resistance to late blight disease could be found in inedible wild potato species, which allowed him to breed new resistant potato varieties. His work dramatically increased potato yields in Mexico and around the world.

Niederhauser worked diligently to educate fellow scientists about potato production and foster global collaborations to address food production challenges. He formed the Inter-American Potato Program, a unit within the Inter-American Food Crop Improvement Program created by the RF in 1961. In 1966, the name was changed to the International Potato Improvement Program to encompass the program's expanding global efforts. Niederhauser then went on to co-found the International Potato Center in Lima, Peru, in 1971, before resigning from the RF in 1973. In 1978 he helped establish the Regional Cooperative Potato Program (PRECODEPA) to foster regional collaboration between agricultural programs in Mexico, Central America, and the Caribbean.

Niederhauser was awarded the World Food Prize in 1990 for his work to develop disease-resistant potato varieties and increase worldwide potato production.

John Niederhauser died on August 12, 2005.

Parker, Dorothy**Biographical/Historical note**

Dorothy Inez Parker was a botanist, librarian, bibliographer, and author whose career with the Rockefeller Foundation (RF) spanned almost three decades, from 1945 to 1970. Parker played a crucial role in developing and establishing agricultural and medical libraries throughout the world.

Parker was born in Traders Point, Indiana on January 23, 1910. She earned her B.S. in botany from Butler University in 1932, and her M.A. and Ph.D. from the University of Cincinnati in 1934 and 1936.

After completing her Ph.D., Parker took a position as the head of the Department of Biology at Brenau College, a women's college in Gainesville, Georgia. She returned briefly to the University of Cincinnati in 1938 to teach Plant Ecology, before becoming the head of the Biology Department at St. Mary's College in Notre Dame, Indiana in 1939. In 1944, Parker again took on a new role, this time as assistant curator of the herbarium and assistant editor of The American Midland Naturalist journal at the University of Notre Dame.

Parker joined the Rockefeller Foundation in 1945 as a temporary Bibliographic Assistant in the Mexican Agricultural Program (MAP). She was promoted to Bibliographer and Librarian of the MAP in 1947, and held this position in Mexico until 1958. A 1960 RF Newsletter profile of Parker enumerated her invaluable contributions to the MAP's agricultural library: "During the years she was in Mexico she amassed and organized the library's collection of texts and references, atlases and maps, bulletins, theses, microfilms, and periodicals; conducted seminars on the use of the library; published a manual on the subject; and maintained a reference service which dealt with a far wider range of questions than one would expect in a library serving research in the development of basic food crops for Mexico." She also edited scholarly papers and reports, translated scientific papers, and reported on

Mexican agricultural conferences for RF staff. Former MAP director J. George Harrar offered a concise summary of Parker's work: "the program could not run without her," he said.

Parker's reputation as a highly skilled librarian and bibliographer ensured that her expertise and guidance were in high demand. Between 1956 and 1959, Parker traveled extensively for the Foundation, advising on the establishment or development of agricultural and medical libraries in Mexico, Honduras, Columbia, India, Thailand, and the Philippines, among others. From 1958-1959, Parker was stationed in India, working as a library advisor to the Foundation's Indian Agricultural Program.

In 1960, Parker became the Foundation's first female officer in the Agricultural Sciences when she was appointed Assistant Director for Agricultural Sciences in the RF's New York Office. In 1963 she was promoted to Associate Director for Agricultural Sciences. Parker retired in 1970, but continued working as a consultant for the Rockefeller Foundation's Agricultural Sciences program for another decade.

Parker's publications include Primer for Agricultural Libraries (1968), Library Report for the Indian Council on Agricultural Research (1969), and Guide for an Agricultural Library Survey for Developing Countries (1970).

Dorothy I. Parker passed away in White Plains, New York, on July 30, 1999.

Rhind, Flora

Biographical/Historical note

Flora M. Rhind rose from a secretarial position to principal officer at a time when few women held formal leadership roles in the Rockefeller Foundation (RF). Her career with three Rockefeller philanthropic organizations--the Rockefeller Foundation, Laura Spelman Rockefeller Memorial (LSRM), and General Education Board (GEB)--spanned thirty-eight years (1926-1964) and was characterized by a devotion to educational and equal opportunity causes.

Rhind was born on April 28, 1904 in New York City. After graduating from high school in 1921, she began working as a secretary and taking evening classes at Hunter College. In 1926, Rhind joined the RF as secretary to vice-president and Division of Studies director Edwin Embree. She was transferred to the Laura Spelman Rockefeller Memorial in 1928 to serve as secretary to Edmund E. Day, who took over the LSRM's social sciences work. When the LSRM was consolidated into the RF in 1929, Day became director for Social Sciences and Rhind returned to the RF.

In 1937, Rhind was appointed the General Education Board's secretary for general education and assumed responsibility for its educational program. She quickly rose through the GEB's ranks: first, she became assistant director (a position she held from 1940-1947), and directed the GEB's fellowships program and its work in the U.S. South. She toured black and white southern colleges and universities, conferring with educational leaders about African American education. She then went on to serve as the GEB's secretary (1952-1961), vice-president (1961-1964) and, beginning in April 1960, the first woman trustee.

Although she continued to work for the GEB, Rhind returned to the Rockefeller Foundation in 1948 to serve as corporate secretary, where she held essential legal, public relations, and record-keeping responsibilities. When the Foundation reentered the field of African American education in 1963 through its Equal Opportunity program, Rhind's GEB experience made her the RF's primary educational advisor and expert. In 1965, she was awarded an honorary Doctor of Law degree from Berea College in Kentucky in honor of her commitment to Southern educational and equal opportunity causes.

On the occasion of her retirement in June 1964, John D. Rockefeller 3rd wrote to Rhind, "I personally will always think of you in relation to Negro education. In this area you have carried a heavy and important load, and will be gratefully remembered by the many you have come in contact with and by the many more who have benefitted by your understanding and wise counsel." President George Harrar, too, reflected on her remarkable career: Rhind "played a unique role in the history of the Rockefeller boards. No one of her present colleagues has served three Rockefeller philanthropic organizations. No other officer has known and worked with all of the chairmen and

presidents of The Rockefeller Foundation since its beginning. Only one other woman has bridged the gap between a secretarial position and that of a principal officer of the Foundation."

After her official retirement, Rhind took on a final project for the RF: Harrar asked her to lead a study of the RF archives, "and to plan how best they can be organized and maintained and to what extent . . . they should be opened to outsiders." The project's importance underscores the extent to which the Foundation valued her judgment and expertise, and solidified her significant legacy.

Flora M. Rhind died on September 19, 1985, in Kennett Square, Pennsylvania. She was 81 years old.

Richardson, Ralph W.

Biographical/Historical note

In his nearly thirty years with the Rockefeller Foundation (RF), Ralph W. Richardson, Jr. worked as a plant geneticist with the Mexican Agricultural Program (MAP), a program officer in the Agricultural Sciences division, and finally, the head of the Foundation's Quality of the Environment (QE) program. Richardson's intellectual curiosity and penchant for the innovative and unconventional earned him a reputation as a kind of "Renaissance man" within the Foundation.

Richardson was born on February 2, 1918 in St. Paul, Minnesota, and spent his boyhood on the banks of the Mississippi River at his family's home in Newport, Minnesota. His love of the outdoors and years spent working for plant nurseries and florist businesses as a teenager and college student inspired him to pursue a horticultural career. He completed his undergraduate and graduate studies at the University of Minnesota, earning his B.S. in 1948 and his Ph.D. in horticulture and plant genetics in 1952. His dissertation, "Genetic Effects of Reduced Fertilization in Tomato Flowers," received the 1954 Leonard H. Vaughan Award for "the most outstanding dissertation in vegetable crop breeding published that year in the United States."

In 1951, the Rockefeller Foundation recruited Richardson to join its Mexican Agricultural Program as an Assistant Plant Geneticist. He worked his way up through the program to Assistant Director (1956-1959) and Director (1959-1962). Richardson's early work with the MAP focused on introducing high-yielding vegetables into Mexican agriculture and improving farmers' cultivation practices. He developed two new tomato varieties ideally suited to Mexican needs--a tomato plant resistant to the grey mold fungus, and a tomato with a firm fruit that could better withstand transportation to market. As Director of the MAP, he helped form Mexico's National Institute of Agricultural Research and served as its Co-Director General, and prepared to transfer the program's work to Mexican colleagues. Richardson also played a central role in the creation of Mexico's International Maize and Wheat Improvement Center, or CIMMYT.

After eleven years with the Mexican Agricultural Program, Richardson returned to the United States in 1962 to join the Agricultural Sciences Division in the Foundation's New York office. He was promoted from Assistant Director to Associate Director and finally, Deputy Director of the Agricultural Sciences Division in 1970.

In 1971, Richardson was promoted to Director of Natural and Environmental Sciences, and placed at the helm of the Foundation's newly created Quality of the Environment program. Under his direction, the QE program made grants in environmental studies education, climate research, regional environmental management, and pesticide research, among others.

When the Foundation's assets plummeted in the economic crisis of the mid-1970s, the QE program was ended. Richardson retired and moved with his wife Amy to State College, Pennsylvania, where he served as an adjunct professor of Agricultural and Environmental Sciences at Penn State. He also took up work as a consultant to the U.S. Department of the Interior, the National Science Foundation, and the National Research Council.

Richardson died on November 21, 2010, in St. Petersburg, Florida.

Rose, Wickliffe

Biographical/Historical note

Born in Tennessee in 1862, Wickliffe Rose devoted much of his life to modernizing the American South and to public health work around the world. A professor of history and philosophy by training, Rose began his career teaching at Peabody College and the University of Nashville. In 1910 he joined the Southern Education Board, an organization devoted to remedying the problems of public education in the American South. He remained with the organization until 1915.

Rose's association with Rockefeller organizations began in 1910 with his appointment as Executive Secretary of the Rockefeller Sanitary Commission (RSC). In this role he directed a massive and successful public health campaign to eradicate hookworm disease in the Southern United States. In its first five years the campaign examined nearly 1.5 million people and provided treatment for 500,000 patients. The campaign was also responsible for the overall improvement of sanitary conditions in the South and for making significant inroads in the improvement of state and local health services. The success of the campaign had major ramifications for improved economic and educational conditions in the South, and the lessons learned during that campaign were applied in subsequent hookworm eradication campaigns worldwide.

As a result of his success with the RSC, Rose was appointed one of the original trustees of the Rockefeller Foundation in 1913. He also served as Chairman of the War Relief Commission from 1914 to 1917 and General Director of the International Health Division (IHD) from 1915 to 1923. As Chairman of the War Relief Commission, he directed support for European refugees, tracked the spread of diseases such as typhus across Europe and administered monetary support for military hospitals devoted to the problems of battlefield wounds and infections. In his role at IHD, Rose applied skills learned during the hookworm campaign to other major global public health campaigns, including research into the causes and eradication of yellow fever. Rose also helped to found public health schools at Johns Hopkins University and Harvard and assisted in the founding the London School of Hygiene and Tropical Medicine.

Following his tenure with the IHD, Rose served as President of the both the General Education Board (GEB) and the International Education Board (IEB) in 1923. In these roles he once again devoted his talents to improving educational opportunities for both white and African-American students in the American South. Rose retired from his work with the RF in 1928, and he died in 1931.

Rusk, Dean

Biographical/Historical note

While mostly remembered for his career in government, Dean Rusk was also a distinguished university professor and an influential president of the Rockefeller Foundation (RF).

Dean Rusk was born in Cherokee County, Georgia, in 1909. He attended Davidson College and was selected as a Rhodes Scholar. Upon graduation, he began a career in teaching as an associate professor of government at Mills College, where he was later named Dean of Faculty. While at Mills, he simultaneously pursued a law degree at the University of California, Berkeley Law School and graduated in 1940.

In 1940 Rusk joined the United States Army as an infantry reserve captain. He participated in the Burma campaigns during World War II and was promoted to Assistant Chief of Staff in the Operations Division of the General Staff. Following the end of the war, he joined the State Department as Assistant Chief of the Division of International Security Affairs, before going on to become Assistant to the Secretary of War and Director of the Office of United Nations Affairs in the State Department. In 1949 he was named Deputy Under Secretary of State, and in 1950 he was named Assistant Secretary of State for Far Eastern Affairs under President Harry Truman. He held this position during an era of tense international relations in the Far East, including the outbreak of the Korean War.

In 1952 Rusk left government service to preside over the RF. He had served on the Foundation's Board of Trustees since 1950. During his tenure as president, the RF devoted more and more of its resources to the problems of the developing world, at a critical moment when many nations were emerging from colonial rule. Work in agriculture began to supplant the foundation's long-standing interests in global health.

Rusk left the RF in 1961 when he was offered the position of Secretary of State under President John F. Kennedy. From the Bay of Pigs invasion to the Cuban missile crisis and the beginning of the Vietnam War, he influenced some of the defining political moments of the twentieth century. Following Kennedy's assassination in 1963, he continued to serve as Secretary of State under Lyndon Johnson. He held the post for a total of eight years, leaving at the end of the Johnson administration.

Following his departure from the Department of State, Rusk returned to the RF as its first Distinguished Fellow. This year-long position gave him the freedom to pursue his own academic interests and time to redirect his career.

Rusk eventually returned to academia, becoming a professor of international law at the University of Georgia from 1970 to 1984. He died in Athens, Georgia in 1994.

Russell, Frederick F.

Biographical/Historical note

Frederick F. Russell was directly responsible for introducing the typhoid vaccine to United States Army troops in 1910. His success with the vaccination program and his expertise in preventive medicine informed his subsequent contributions to the international health programs of the Rockefeller Foundation (RF) from 1919 to 1935.

Russell was born in Auburn, New York, in 1870. A graduate of Cornell University and the College of Physicians and Surgeons at Columbia University, he was also educated at the University of Berlin. Following a commission in the United States Army Medical Corps, he first began to conduct research on typhoid vaccinations. In 1907 this research led to his appointment as Curator of the Army Medical Museum and instructor at both the Army Medical School and George Washington University. In 1917 he went on to earn a Doctor of Science degree from George Washington University.

In 1908, on behalf of the of the Surgeon General and the Army, Russell visited medical researchers in London and Berlin to observe vaccination experiments using live typhoid organisms to protect against transmission of that disease. Upon his return, he recommended emulating that approach and received support to establish a vaccine laboratory to conduct more tests. He then developed and implemented the Army's highly successful typhoid vaccination program.

The success with the typhoid vaccine program and his leadership of the military medical laboratories during World War I and later in the Panama Canal Zone brought Russell to the attention of Wickliffe Rose, director of the RF's International Health Board (IHB). In 1919 Rose hired Russell to develop the IHB's public health laboratory service. Upon joining the RF and resigning from the Army, he was promoted to Brigadier General in the Medical Reserve Corps. When Rose stepped down as IHB director in 1923, Russell replaced him and retained that position when the International Health Division (IHD) replaced the IHB in 1927.

Russell originally promoted laboratories for public health diagnostic work and later emphasized the importance of scientific research to improve public health and to serve as the basis for successful disease control programs, such as those run by the RF for malaria and yellow fever. This focus on laboratories and research often put Russell at loggerheads with other members of the RF staff who sought to support more applied health programs. According to the scientist and scholar John Farley, Russell "was far too confident and powerful to worry about what was going on behind his back. With his authoritative bearing and military manner... (He) established few personal relationships with his colleagues." Yet, "under his direction the Health Division's morale remained high and it reached the pinnacle of its power and influence." [1]

Russell continued his career in applied medical research following his retirement from the RF in 1935; that year the National Academy of Sciences awarded him the Public Welfare Medal. For the next four years he served as a professor of epidemiology and preventive medicine at Harvard University. Frederick F. Russell died at the age of 90 in 1960.

Russell, Harry Luman

Biographical/Historical note

Harry Luman Russell (1866-1954) was an American bacteriologist and educator. Russell was graduated from the University of Wisconsin in 1884, received an M.S. from Wisconsin in 1890, and a Ph.D. from Johns Hopkins in 1892. Russell then became a Professor at the University of Wisconsin. In 1903 Russell was made Director of the

Wisconsin State Hygienic Laboratory, and became Dean of the University of Wisconsin's College of Agriculture in 1907. Russell was also a charter member of the American Society for Microbiology, and was named President in 1908. In 1925 Russell was commissioned by the International Education Board (IEB) to travel through Asia, and survey the scientific and agricultural education needs in Japan, China, the Philippines, Siam, Java, Australia, and New Zealand.

Scope and Contents

Harry Luman Russell's logs (diaries) document his 1925-1926 trip through Asia, and survey the scientific and agricultural education needs in Japan, China, the Philippines, Siam, Java, Australia, and New Zealand.

As a staffer for the RF's International Health Division, Russell's diary is arranged according to interview and visit. He continues his investigations on malaria research with an emphasis on mosquito control. Malaria studies include measurements of spleen and blood indices, mosquito densities, as well as capture of larvae and adult mosquitoes. Field studies at various sites in India include experiments with spray killing mosquitoes, and the correlation between irrigation and malaria. Includes, "Agenda of a conference at Pattukkottai Field Station of Malaria Investigations."
