Biographical/Historical note

The Rockefeller Foundation was established by act of the New York State Legislature approved by the Governor on May 14, 1913, "to promote the well-being of mankind throughout the world." Between 1913 and 1928 the China Medical Board, the International Health Board, and the Division of Medical Education functioned as divisions of the Foundation, concentrating on the administration of programs in public health and medical education. A Division of Studies was created in 1923 to handle projects outside the medical field. These early years were experimental as the new foundation studied the methods of philanthropy and explored its relationships with other Rockefeller boards.

Although the Rockefeller Foundation is the largest and best known philanthropy founded by the Rockefeller family, it was neither the first nor the last to be established. The Rockefeller Institute for Medical Research (1901), the General Education Board (1902), the Rockefeller Sanitary Commission for the Eradication of Hookworm Disease (1909), and the Bureau of Social Hygiene (1911) all existed earlier. When the Foundation was created, the Sanitary Commission was disbanded. After the establishment of the Foundation, the Laura Spelman Rockefeller Memorial (1918) and the International Education Board (1923) were created.

The Rockefeller boards and their programs were reconsidered and reorganized in 1927-1928 in order to avoid overlapping programs. The International Health Board of the Foundation was disbanded and an International Health Division was organized. The China Medical Board, Inc., was established as a separately incorporated institution, and the China Medical Board of the Foundation ceased to exist. The Division of Studies was dropped and the Division of Medical Education was phased out. The Laura Spelman Rockefeller Memorial was combined with the Foundation and the Spelman Fund of New York was chartered to continue activities of the LSRM that were not absorbed by the Foundation. The International Education Board was disbanded.

As a result of this reorganization, the Foundation adopted a program which included public health work (administered by the IHD), the advancement of knowledge in the medical and natural sciences (in part taken over from the IEB), the social sciences (formerly the field of the LSRM), and the humanities and arts (shared with the GEB). The Rockefeller Institute and the Bureau of Social Hygiene were not affected by the reorganization. The program adopted by the Foundation at this time remained basically the same for the next twenty years.

As its files accumulated, the Foundation maintained a card index recording the names of institutional and individual grantees and correspondents. A microfilm copy of this index is available at the Archive Center.

[^ Return to Table of Contents](#)

Scope and Contents

Types of records include: project files.

[^ Return to Table of Contents](#)

Arrangement note

The project files are arranged in series according to country. Each country or geographical area was assigned a three-digit number by RF staff. In addition, letters signifying program areas are used: for example, "A" indicates a grant in the Medical Sciences, and "C" Nursing. Material is organized within these letter/program subdivisions alphabetically by grant title. A grant title usually consists of a heading that includes the name of the institution or individual that received the grant. Thus each grant, or project, is filed individually in one or more folders.

Conditions Governing Access note

Open for research with select materials restricted as noted. Brittle or damaged items are available at the discretion of RAC. Confidential material in this record group has been segregated and is inaccessible. Each pertinent file is open to research, and physical removal of the segregated material within each file is not necessary. Researchers interested in accessing digital media (floppy disks, CDs, DVDs, etc.) or audiovisual material (audio cassettes, VHS, etc.) in this collection must use an access surrogate. The original items may not be accessed because of preservation concerns. To request an access surrogate be made, or if you are unsure if there is an access surrogate, please contact a RAC archivist.

Collection Inventory

Latin America, 1936-1961

Physical Description: 3.2 Cubic Feet

Physical Description: 8 __Boxes __3.2 cubic feet

Scope and Contents note

This series consists of material relating to more than one country in Latin America. Most of the series is composed of files of recipients of Foundation Agricultural Scholarships in the 1950's (300 D).

Arrangement note

Five subseries as follows:

300 (no program letter; general material which does not fit into a particular program area)

300 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

300 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

300 R Humanities and arts

300 S Social sciences

Latin America - General (No Program)

Argentina, 1917-1962

Physical Description: 2.3 Cubic Feet

Physical Description: 7 __Boxes __2.3 cubic feet

Scope and Contents note

The majority of projects treated in this material are in the medical and natural sciences and date from the 1940's and 1950's. Prominent institutions are the Institute of Biochemical Research, the University of Buenos Aires, the National University of the Litoral, the Institute of Plant Science, and the University of Cordoba. Early files, generated by Foundation officers, include a report by Richard M. Pearce, "Medical Education in Argentina," (1917, 1925) and reports by Nelson C. Davis, Persis Putnum, E. R. Rickard, and R. C. Shannon.

Arrangement note

Eight subseries as follows:

301 (no program letter; general material which does not fit into a particular program area)

301 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

301 C Nursing (nursing education, public health nursing.

301 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

301 I Malaria

301 M Respiratory diseases

301 R Humanities and arts

301 S Social sciences

Argentina - General (No Program)

[^ Return to Table of Contents](#)

Brazil, 1916-1969

Physical Description: 22.8 Cubic Feet

Physical Description: 57 __Boxes __22.8 cubic feet

Scope and Contents note

Early Brazilian material (1916-1940) reflects The Rockefeller Foundation's commitment to public health and hygiene, including work to control diseases as hookworm, malaria, and yellow fever. Yellow fever was a dominant concern of The Foundation in Brazil from 1927 to 1955; the Foundation operated two laboratories in Bahia and Rio de Janeiro. The voluminous yellow fever files contain staff diaries and journals, laboratory diaries, records of surveys and tests, and case histories. Other early grants went to the Sao Paulo Faculty of Medicine and schools of nursing in Sao Paulo and Rio de Janeiro. In the 1940s and 1950s agricultural projects became a major concern. During this period, grants to programs in the natural sciences, particularly at the University of Sao Paolo, were also numerous.

Arrangement note

Twelve subseries as follows:

305 (no program letter; general material which does not fit into a particular program area)

305 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

305 C Nursing (nursing education, public health nursing)

305 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

305 H Hookworm

305 I Malaria

305 J Public health demonstrations, local health units

305 L Public health education (schools of hygiene and public health)

305 O Yellow fever

305 R Humanities and arts

305 S Social sciences

305 V Virus studies

Brazil - Medical Sciences

Scope and Contents note

Early Brazilian material (1916-1940) reflects The Rockefeller Foundation's commitment to public health and hygiene, including work to control diseases as hookworm, malaria, and yellow fever. Yellow fever was a dominant concern of The Foundation in Brazil from 1927 to 1955; the Foundation operated two laboratories in Bahia and Rio de Janeiro. The voluminous yellow fever files contain staff diaries and journals, laboratory diaries, records of surveys and tests, and case histories. Other early grants went to the Sao Paulo Faculty of Medicine and schools of nursing in Sao Paulo and Rio de Janeiro. In the 1940s and 1950s agricultural projects became a major concern. During this period, grants to programs in the natural sciences, particularly at the University of Sao Paolo, were also numerous.

The voluminous yellow fever files contain staff diaries and journals, laboratory diaries, records of surveys and tests, and case histories. Other early grants went to the Sao Paulo Faculty of Medicine and schools of nursing in Sao Paulo and Rio de Janeiro. In the 1940s and 1950s agricultural projects became a major concern. During this period, grants to programs in the natural sciences, particularly at the University of Sao Paolo, were also numerous.

Brazil - Social Sciences

Scope and Contents note

Early Brazilian material (1916-1940) reflects The Rockefeller Foundation's commitment to public health and hygiene, including work to control diseases as hookworm, malaria, and yellow fever. Yellow fever was a dominant concern of The Foundation in Brazil from 1927 to 1955; the Foundation operated two laboratories in Bahia and Rio de Janeiro. The voluminous yellow fever files contain staff diaries and journals, laboratory diaries, records of surveys and tests, and case histories. Other early grants went to the Sao Paulo Faculty of Medicine and schools of nursing in Sao Paulo and Rio de Janeiro. In the 1940s and 1950s agricultural projects became a major concern. Chile, 1919, 1936-1956, 1967

Physical Description: 2.8 Cubic Feet

Physical Description: 7 __Boxes __2.8 cubic feet

Scope and Contents note

The only material in Series 309, Chile, dating before the 1930's is a report on medical education, medical relief, and public health (1919) by Richard M. Pearce. Except for a few grants for projects in agriculture, the humanities, and medicine, which were funded in the 1930's, most Foundation support to Chile began in the 1940's and continued into the 1950's. Grants for agricultural and medical research at the University of Chile and the Catholic University predominate; public health projects were also supported.

Arrangement note

Eight subseries as follows:

309 (no program letter; general material which does not fit into a particular program area)

309 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

309 C Nursing (nursing education, public health nursing)

309 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

309 J Public health demonstrations, local health units

309 K Health services (epidemiology, reform, public health administration, laboratories, vital statistics, and particularly sanitary engineering)

309 R Humanities and arts

309 S Social sciences

Physical Description: 10.4 Cubic Feet

Physical Description: 26 __Boxes __10.4 cubic feet

Scope and Contents note

The early (1920's) material in these files concerns the medical sciences and includes a report on medical education in Mexico which was part of a world-wide Rockefeller Foundation survey of medical education. Public health related records also begin in the 1920's and continue into the 1940's; these records concern Foundation work with typhoid fever, hookworm, malaria, and health demonstration units.

Records relating to the agricultural program in Mexico span the years from 1933 to 1956, with the bulk of the material dated between 1945 and 1955. In 1943, the Foundation launched its renowned Mexican agricultural program. This program administered by The Rockefeller Foundation, included research by resident Foundation staff to improve Mexico's major food crops; fellowships, scholarships, and travel grants to train Mexican agricultural scientists as well as scientists from other countries; and grants to universities and other institutions to support education and research in agricultural science. The agricultural program records are found in 323, with the exception of institutional grants which are located in 323 D. Additional records of the Foundation agricultural program in Mexico are located in RG 1.2, Series 323.

Files from the 1940's and 1950's also resulted from RF grants to institutions in the areas of medical research and education, the natural sciences (mathematics, chemistry, physics), and the humanities and social sciences (libraries and museums, history and anthropology, music).

Arrangement note

Nine subseries as follows:

323 (no program letter, general material which does not fit into a particular program area)

323 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

323 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

323 H Hookworm

323 I Malaria

323 J Public health demonstrations, local health units

323 Q Epidemiological investigations and studies

323 R Humanities and arts

323 S Social sciences

Mexico - Natural Sciences and Agriculture

Scope and Contents note

The early (1920's) material in these files concerns the medical sciences and includes a report on medical education in Mexico which was part of a world-wide Rockefeller Foundation survey of medical education. Public health related records also begin in the 1920's and continue into the 1940's; these records concern Foundation work with typhoid fever, hookworm, malaria, and health demonstration units.

Records relating to the agricultural program in Mexico span the years from 1933 to 1956, with the bulk of the material dated between 1945 and 1955. In 1943, the Foundation launched its renowned Mexican agricultural program. This program administered by The Rockefeller Foundation, included research by resident Foundation staff to improve Mexico's major food crops; fellowships, scholarships, and travel grants to train Mexican agricultural scientists as well as scientists from other countries; and grants to universities and other institutions to support education and research in agricultural science. The agricultural program records are found in 323, with the exception of institutional grants which are located in 323 D. Additional records of the Foundation agricultural program in Mexico are located in RG 1.2, Series 323.

Files from the 1940's and 1950's also resulted from RF grants to institutions in the areas of medical research and education, the natural sciences (mathematics, chemistry, physics), and the humanities and social sciences (libraries and museums, history and anthropology, music).

Peru - Medical Sciences

Scope and Contents note

The earliest files, dealing with medical sciences, include a report (1926) which resulted from The Rockefeller Foundation's world-wide survey of medical education. Some public health material is present, including files relating to the ICA Health Service, the National Institute of Hygiene, malaria and yellow fever. The Foundation made grants in the medical sciences during the 1940's and 1950's to the University of San Marcos in Lima; it also supported agricultural and veterinary research in the 1950's at various institutions including the National School of Agriculture in La Molina and the University of San Marcos at Lima.

[^ Return to Table of Contents](#)

England, 1919-1960

Physical Description: 10.4 Cubic Feet

Physical Description: 83 __Boxes __10.4 cubic feet

Scope and Contents note

The earliest material in this series documents The Rockefeller Foundation's concern with medical education. Of particular interest are files related to the support of the London School of Hygiene and Tropical Medicine and a report by Richard M. Pearce on medical education in England (1923-1926). Numerous fellowships were awarded English medical students, especially during and immediately after World War II.

After 1928, the Foundation's activities expanded into the humanities and social sciences. Among the first non-US grants in these areas were made to the British Museum, the Bodleian Library (Oxford), and the London School of Economics and Political Science.

Other fields of interest for the Foundation in England include nursing, physics, biochemistry, organic chemistry, and placement of refugee scholars.

Arrangement note

Nine subseries as follows:

401 (no program letter, general material which does not fit into a particular program area)

401 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

401 C Nursing (nursing education, public health nursing)

401 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

401 E Fellowships, training awards

401 F Declinations (within program, or outside program but receiving more consideration than a flat declination, i.e. request circulated to a number of officers for opinion before declining; outside opinion solicited; considerable correspondence leading to the declination)

401 I Malaria

401 R Humanities and arts

401 S Social sciences

England - Medical Sciences

Scope and Contents note

The earliest material in this series documents The Rockefeller Foundation's concern with medical education. Of particular interest are files related to the support of the London School of Hygiene and Tropical Medicine and a

report by Richard M. Pearce on medical education in England (1923-1926). Numerous fellowships were awarded English medical students, especially during and immediately after World War II.

After 1928, the Foundation's activities expanded into the humanities and social sciences. Among the first non-US grants in these areas were made to the British Museum, the Bodleian Library (Oxford), and the London School of Economics and Political Science.

Other fields of interest for the Foundation in England include nursing, physics, biochemistry, organic chemistry, and placement of refugee scholars.

England - Nursing

Scope and Contents note

The earliest material in this series documents The Rockefeller Foundation's concern with medical education. Of particular interest are files related to the support of the London School of Hygiene and Tropical Medicine and a report by Richard M. Pearce on medical education in England (1923-1926). Numerous fellowships were awarded English medical students, especially during and immediately after World War II.

After 1928, the Foundation's activities expanded into the humanities and social sciences. Among the first non-US grants in these areas were made to the British Museum, the Bodleian Library (Oxford), and the London School of Economics and Political Science.

Other fields of interest for the Foundation in England include nursing, physics, biochemistry, organic chemistry, and placement of refugee scholars.

[^ Return to Table of Contents](#)

Ireland, 1922-1972

Physical Description: 1.2 Cubic Feet

Physical Description: 3 __Boxes __1.2 cubic feet

Scope and Contents note

The earliest material in this series treats the Foundation's interest in public health and medical education in the Republic of Ireland, including field units in Counties Cork, Donegal and Kildare. Later areas of interest included physics, nursing, and zoology and the humanities.

Material extending from 1950 to 1972 consists entirely of a historical record of the activities of the Irish Folklore Institute.

Arrangement note

Eight subseries as follows:

403 (no program letter; general material which does not fit into a particular program area)

403 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

403 C Nursing (nursing education, public health nursing)

403 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

403 J Public health demonstrations, local health units

403 K Health services (epidemiology, reform, public health administration, laboratories, vital statistics, and particularly sanitary engineering)

403 L Public health education (schools of hygiene and public health)

403 R Humanities and arts

Ireland - General (No Program)

Australia - Humanities and Arts

Scope and Contents note

Early Rockefeller Foundation grants to Australia were made both in medical education and anthropological research. Between 1929 and 1961 the Foundation sponsored a series of fellowships in the social sciences. The foundation also funded an important survey of the humanities in Australia between 1945 and 1947.

The first Foundation grant to Canada was as part of a relief effort in Newfoundland (1914). As part of regular program oriented support, the Foundation supported various medical and public health projects, especially between 1920 and 1950. Dalhousie and McGill University, the Universities of Manitoba and Montreal, and various Provincial governments were the main beneficiaries of the Foundation's interests in these areas.

In the humanities, the Foundation gave grants for folklore studies, library surveys, and drama, mainly in the 1940's. Support for the social sciences came mainly through grants and fellowships administered by the Canadian social Science Research Council (1940-1957) and various universities.

Jamaica, 1928-1948

Physical Description: 4.4 Cubic Feet

Physical Description: 11 __Boxes __4.4 cubic feet

Scope and Contents note

The earliest Foundation grants to Jamaica were made as part of its programs against hookworm disease and malaria and for development of public health facilities. The largest amount of Foundation activity here, however, was in the area of tuberculosis control (1931-1941). This series contains considerable material on that subject, including narrative and statistical reports and records of an x-ray unit funded by the Foundation.

Arrangement note

Ten subseries as follows:

437 (no program letter; general material which does not fit into a particular program area)

437 C Nursing (nursing education, public health nursing)

437 H Hookworm

437 I Malaria

437 J Public health demonstrations, local health units

437 K Health services (epidemiology, reform, public health administration, laboratories, vital statistics, and particularly sanitary engineering)

437 L Public health education (schools of hygiene and public health)

437 R Humanities and arts

437 T Tuberculosis

437 U Yaws

Scope and Contents note

The earliest Foundation grants to Jamaica were made as part of its programs against hookworm disease and malaria and for development of public health facilities. The largest amount of Foundation activity here, however, was in the area of tuberculosis control (1931-1941). This series contains considerable material on that subject, including narrative and statistical reports and records of an x-ray unit funded by the Foundation.

India, 1913-1915, 1924-1971

Physical Description: 9.8 Cubic Feet

Physical Description: 20 __Boxes __9.8 cubic feet

Scope and Contents note

The earliest Foundation grant to India (1913) was made to the All-India School of Hygiene and Public Health at Calcutta. This school continued to be the major institutional recipient of Foundation aid in the areas of public health and medical education until 1950.

Of particular interest in this series is a 30 volume manuscript survey and history of medical education in India by W. S. Carter (1926-1927).

During the 1930's and 1940's the Foundation supported various rural health programs, developmental aid to nursing, and a survey of librarianship during this period. From 1951 to 1971 the Foundation's main interest in India was expressed through its virus disease research program. Researchers should note that material covering virus research is filed under both 464 and 464 V.

The Foundation also funded public health and anti-malaria work in the independent Indian states of Mysore (464.1), Sawantwadi (464.4), and Travancore (464.5) from 1928 to 1944. After independence was granted India in 1947, these numerical designations were dropped from the Foundation's classification scheme.

Arrangement note

Ten subseries as follows:

464 (no program letter; general material which does not fit into a particular program area)

464 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

464 C Nursing (nursing education, public health nursing)

464 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

464 E Fellowships, scholarships, training awards

464 I Malaria

464 J Public health demonstrations, local health units

464 K Health services (epidemiology, reform, public health administration, laboratories, vital statistics, and particularly sanitary engineering)

464 R Humanities and arts

464 V Virus studies

India - Public Health Demonstrations

Scope and Contents note

The earliest Foundation grant to India (1913) was made to the All-India School of Hygiene and Public Health at Calcutta. This school continued to be the major institutional recipient of Foundation aid in the areas of public health and medical education until 1950.

Of particular interest in this series is a 30 volume manuscript survey and history of medical education in India by W. S. Carter (1926-1927).

During the 1930's and 1940's the Foundation supported various rural health programs, developmental aid to nursing, and a survey of librarianship during this period. From 1951 to 1971 the Foundation's main interest in India was expressed through its virus disease research program. Researchers should note that material covering virus research is filed under both 464 and 464 V.

The Foundation also funded public health and anti-malaria work in the independent Indian states of Mysore (464.1), Sawantwadi (464.4), and Travancore (464.5) from 1928 to 1944. After independence was granted India in 1947, these numerical designations were dropped from the Foundation's classification scheme.

North Africa Region - Hookworm

Scope and Contents note

The Rockefeller Foundation first gave attention to this area as part of its world-wide survey of medical education. From 1928 until 1950, the Foundation also funded projects in hookworm and malaria control, public sanitation, and museum training. Included in these records are correspondence, reports, and a diary by J. Austin Kerr (1944-1946).

General note

Actual dates for this series are: 1915, 1923-1924, 1926-1952, 1952.

France, 1916-1959

Physical Description: 13 Cubic Feet

Physical Description: 32 __Boxes __13 cubic feet

Scope and Contents note

Grants to French institutions were made primarily in the medical sciences field. The earliest grants were awarded for the campaign against tuberculosis, from which the Foundation's nursing program was created. The University of Paris was the major recipient of grants for the medical sciences. Funds were given for work by Th. Alajouanine, Jean Scherrer, and Clovis Vincent in neurology and neurosurgery and by Georges Heuyer in psychiatry. Funding was given to the Radium Institute in the 1920's, 1930's, and 1940's. The University of Lyons and the University of Strasbourg were also recipients of a relatively large number of medical sciences grants. In addition, there are files dealing with the Pearce report on French medical education which was part of a report on medical education throughout the world.

The Rockefeller Foundation also gave funding to a full range of humanities and social sciences programs. A large number of grants were given for work in philosophy. Grants were also given for a broad range of studies including art history and geography and ethnology. A number of humanities and social sciences grants were made to refugee scholars, including Richard Alewyn (German Literature), Elias Bickermann (Greek archeology), Kurt Sachs (music history), Julius Lewy (Assyriology), and Paul Schrecker (Philosophy).

The American Library in Paris and the Bibliotheque Nationale also received Foundation support.

Arrangement note

Twelve subseries as follows:

500 (no program letter; general material which does not fit into a particular program area)

500 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

500 C Nursing (nursing education, public health nursing)

500 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

500 J Public health demonstrations, local health units

500 K Health services (epidemiology, reform, public health administration, laboratories, vital statistics, and particularly sanitary engineering)

500 L Public health education (schools of hygiene and public health)

500 O Yellow fever

500 P Undulant fever

500 R Humanities and arts

500 S Social sciences

500 T Tuberculosis

France - Public Health Demonstrations

Scope and Contents note

Grants to French institutions were made primarily in the medical sciences field. The earliest grants were awarded for the campaign against tuberculosis, from which the Foundation's nursing program was created. The University of Paris was the major recipient of grants for the medical sciences. Funds were given for work by Th. Alajouanine, Jean Scherrer, and Clovis Vincent in neurology and neurosurgery and by Georges Heuyer in psychiatry. Funding was given to the Radium Institute in the 1920's, 1930's, and 1940's. The University of Lyons and the University of Strasbourg were also recipients of a relatively large number of medical sciences grants. In addition, there are files dealing with the Pearce report on French medical education which was part of a report on medical education throughout the world.

The Rockefeller Foundation also gave funding to a full range of humanities and social sciences programs. A large number of grants were given for work in philosophy. Grants were also given for a broad range of studies including art history and geography and ethnology. A number of humanities and social sciences grants were made to refugee scholars, including Richard Alewyn (German Literature), Elias Bickermann (Greek archeology), Kurt Sachs (music history), Julius Lewy (Assyriology), and Paul Schrecker (Philosophy).

The American Library in Paris and the Bibliotheque Nationale also received Foundation support.

Asia, 1906-1957

Scope and Contents note

The earliest records of this series (1906-1910) are reports on education in the Far East, particularly in India, China, and Japan, examining the possibilities of establishing western educational systems there. Records from the 1930s-1940s report on the schools that were established, including the Peking Union Medical College, and the effect of medical education on Far Eastern demography. There is also material relating to the American Schools of Oriental Research in Bagdad and Jerusalem.

Arrangement note

Four subseries as follows:

600 (no program letter; general material which does not fit into a particular program area)

600 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

600 E Fellowships, scholarships, and training awards

600 R Humanities and arts

Existence and Location of Copies note:

Asia - Medical Sciences

Scope and Contents note

The earliest records of this series (1906-1910) are reports on education in the Far East, particularly in India, China, and Japan, examining the possibilities of establishing western educational systems there. Records from the 1930s-1940s report on the schools that were established, including the Peking Union Medical College, and the effect of medical education on Far Eastern demography. There is also material relating to the American Schools of Oriental Research in Bagdad and Jerusalem.

Existence and Location of Copies note:

China, 1913-1960

Physical Description: 21 Cubic Feet

Physical Description: 53 __Boxes __21 cubic feet

Scope and Contents note

From 1913 to 1928 the Foundation's interests in China were directed by the China Medical Board, a division of the foundation. In 1928 the China Medical Board was separately incorporated and the functions continued by the Foundation were transferred to the Foundation's Division of Medical Education. Series 601 contains material after 1928, except for the Historical Records, which go back to 1913. Although the bulk of the material originated before 1945, there is also correspondence as late as 1960. The material consists of correspondence, memos, and reports relating to specific grants, and reports of a general nature which are filed in the 601 (General) section. A section on program and policy contains administrative and policy information in various forms.

Major areas of interest were agriculture and rural economics, public health and medicine. Grants were made predominantly to hospitals, universities and institutes of research. Of special interest are the files on rural reconstruction, the Mass Education movement, and the Peking Union Medical College.

Arrangement note

Ten subseries as follows:

601 (no program letter; general material which does not fit into a particular program area)

601 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

601 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

601 E Fellowships, scholarships, training awards

601 I Malaria

601 J Public health demonstrations, local health units

601 L Public health education (schools of hygiene and public health)

601 R Humanities and arts

601 S Social sciences

601 T Tuberculosis

China - Fellowships, scholarships, training awards

Scope and Contents note

From 1913 to 1928 the Foundation's interests in China were directed by the China Medical Board, a division of the foundation. In 1928 the China Medical Board was separately incorporated and the functions continued by the Foundation were transferred to the Foundation's Division of Medical Education. Series 601 contains material after 1928, except for the Historical Records, which go back to 1913. Although the bulk of the material originated before 1945, there is also correspondence as late as 1960. The material consists of correspondence, memos, and reports relating to specific grants, and reports of a general nature which are filed in the 601 (General) section. A section on program and policy contains administrative and policy information in various forms.

Major areas of interest were agriculture and rural economics, public health and medicine. Grants were made predominantly to hospitals, universities and institutes of research. Of special interest are the files on rural reconstruction, the Mass Education movement, and the Peking Union Medical College.

Related Archival Materials note:

Related Archival Materials note

For a more complete view of the Rockefeller Foundation's program in China the records of the China Medical Board, Record Group 4 and of the China Medical Board, Inc. Collection should be consulted. Correspondence and reports can also be found in the Foundation's General Correspondence files, Record Group 2.

Physical Description: 2.4 Cubic Feet

Physical Description: 6 __Boxes __2.4 cubic feet

Scope and Contents note

Most of this series contains material relating to medical and natural sciences during the 1930's - 1940's. Prominent institutes are the University of Amsterdam, the University of Groningen, the University of Leiden, and the University of Utrecht. Projects included the University of Leiden Observatory, travel grants, and malaria. In the 1940's, Foundation aid to the social sciences and humanities increased, giving grants to museums, libraries, Far Eastern Studies, and economics.

Arrangement note

Six subseries as follows:

650 (no program letter; general material which does not fit into a particular program area)

650 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

650 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

650 I Malaria

650 R Humanities and arts

650 S Social sciences

Yugoslavia, 1920-1954

Physical Description: 2 Cubic Feet

Physical Description: 5 __Boxes __2 cubic feet

Scope and Contents note

The material dealing with The Rockefeller Foundation's activities in Yugoslavia covers nine subject areas. There is a concentration of material in medical science (1920-1954), which covers grants to universities, a report of medical education in Yugoslavia, visits by scholars and educators, and public health. There is also material concerning nursing (1920-1950), which includes a report by F. Elisabeth Crowell, schools of nursing, and a travel grant.

Arrangement note

The material is divided into the following nine subseries:

710 (no program letter; general material which does not fit into a particular program area)

710 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

710 C Nursing (nursing education, public health nursing)

710 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

710 E Fellowships, scholarships, training awards

710 I Malaria

710 J Public health demonstrations, local health units

710 K Health services (epidemiology, reform, public health administration, laboratories, vital statistics, and particularly sanitary engineering)

710 L Public health education (schools of hygiene and public health

Estonia, 1929-1945

Physical Description: 0.4 Cubic Feet

Physical Description: 1 __Box __0.4 cubic feet

Scope and Contents note

This material concerns grants made to the University of Dorpat.

Arrangement note

This material is divided into two subseries:

714 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

714 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

Estonia - Medical Sciences

Scope and Contents note

This material concerns grants made to the University of Dorpat.

Iceland, 1924-1955

Physical Description: 1.2 Cubic Feet

Physical Description: 3 __Boxes __1.2 cubic feet

Scope and Contents note

The material dealing with medical and natural science involved The University of Iceland with the exception of a general medical sciences file and a survey of medical education by Alan Gregg.

Arrangement note

The material concerning The Rockefeller Foundation's activities in Iceland is divided into three subseries:

715 (no program letter; general material which does not fit into a particular program area)

715 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

715 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

Germany, 1920-1970

Physical Description: 8.8 Cubic Feet

Physical Description: 22 __Boxes __8.8 cubic feet

Scope and Contents note

The material concerned with The Rockefeller Foundation's activities in Germany is concentrated in Medical Sciences, including research grants (1922-1950) to specific institutions for research in specific areas and reports on medical education and medical literature in Germany, and Natural Science grants to institutions and specific persons. Also of interest in the General Topic area is a Postwar Survey by both Robert J. Havighurst and Albert R. Mann, including supplements, diaries, and preliminary material.

Arrangement note

The material is divided into the following nine subseries:

717 (no program letter; general material which does not fit into a particular program area)

717 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

717 C Nursing (nursing education, public health nursing)

717 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

717 E Fellowships, scholarships, training awards

717 F Declinations (within program, or outside program but receiving more consideration than a flat declination, i.e. request circulated to a number of officers for opinion before declining; outside opinion solicited; considerable correspondence leading to the declination)

Hungary, 1922-1956

Physical Description: 2 Cubic Feet

Physical Description: 5 __ Boxes __ 2 cubic feet

Scope and Contents note

The records on Hungary document Foundation activity that almost exclusively related to medicine and public health. The University of Budapest received an extensive number of grants in such fields as pediatric medicine, pharmacology, physiology and nursing. There is a file covering the work in biochemistry of Albert Szent-Gyorgyi, 1937 winner of the Nobel Prize in medicine and physiology. In the field of public health, the Foundation helped set up local health department in Godollo, Mezokovesd, Pecs, and Vac. There is also a grant, which ran from 1927 through 1931, to the State Hygienic Institute for a study on influenza.

Arrangement note

Ten subseries as follows:

750 (no program letter; general material which does not fit into a particular program area)

750 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

750 C Nursing (nursing education, public health nursing)

750 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

750 E Fellowships, scholarships, training awards

750 J Public health demonstrations, local health units

750 K Health services (epidemiology, reform, public health administration, laboratories, vital statistics, and particularly sanitary engineering)

750 L Public health education (schools of hygiene and public health)

750 M Respiratory diseases

750 S Social sciences

Italy, 1912-1962

Physical Description: 3.2 Cubic Feet

Physical Description: 8 __Boxes __3.2 cubic feet

Scope and Contents note

This material is concentrated in the 1930's and 1940's. Included is a public Health Survey of 1949. There are a number of Universities that the Rockefeller Foundation gave grants to covering the field of medical science (1920-1957). There are also reports by F. Elizabeth Crowell on nursing (1922, 1924), material dealing with natural science grants to universities, and reports on malaria.

Arrangement note

This series is divided into the following nine subseries:

751 No program letter General material which does fit into a particular program area

751 A Medical Sciences Research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings

751 C Nursing Nursing education, public health nursing

751 D Natural Sciences and Agriculture Research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture

751 I Malaria

751 J Public health demonstrations, local health units

751 L Public health education (schools of hygiene and public health

751 R Humanities and Arts

751 S Social Sciences

This material is concentrated in three topic areas; medical sciences, in which The Rockefeller Foundation gave most grants to specific universities in varied field (1925-1951), natural science, with the concentration being in grants made to the University of Oslo (1929-1955), and humanities (1945-1950).

Arrangement note

The 767 series is divided into the following seven subseries:

767 (no program letter; general material which does not fit into a particular program area)

767 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

767 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

767 K Health services (epidemiology, reform, public health administration, laboratories, vital statistics, and particularly sanitary engineering)

767 L Public health education (schools of hygiene and public health)

767 R Humanities and arts

767 S Social sciences

Norway - General (No Program)**Title/Description****Instances**

(GUN) Gunn, Selskar M. "Public Health in Norway", 1924

box 1

folder 1

Norway - Medical Sciences

Scope and Contents note

This material is concentrated in three topic areas; medical sciences, in which The Rockefeller Foundation gave most grants to specific universities in varied field (1925-1951), natural science, with the concentration being in grants made to the University of Oslo (1929-1955), and humanities (1945-1950).

Rumania, 1920-1949

Physical Description: 2 Cubic Feet

Physical Description: 4 __Boxes __2 cubic feet

Scope and Contents note

The files for Rockefeller Foundation activity in Rumania show a very strong involvement in medical, public health and nursing projects. Grants were made for medical research in anatomy and physiology. Projects were funded for the eradication of scarlet fever and malaria, for the work of the Cluj Institute of Hygiene and the Institute of Hygiene in Bucharest and for various local health department activities and public health demonstrations. The Bucharest and Cluj schools of nursing also received grants, the latter for public health nursing. There were also grants for work in psychology at the University of Cluj and for the Roumanian Institute of Social Science.

Arrangement note

Nine subseries as follows:

783 (no program letter; general material which does not fit into a particular program area)

783 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

783 C Nursing (nursing education, public health nursing)

Poland, 1920-1957

Physical Description: 2 Cubic Feet

Physical Description: 5 __Boxes __2 cubic feet

Scope and Contents note

Rockefeller Foundation activity in Poland, as documented in these records, involved primarily the funding of biomedical research work, public health programs, and nursing. Biomedical research was funded at the Universities of Cracow, Lodz, Warsaw, and Wroclaw in such fields as neurology and neurosurgery, pathology, pediatrics, and physiology. Public health projects were funded in Bendzin, Lwow, Makotow, Skierniewice, Vilno, and Warszawa. Nursing programs were funded at the University of Cracow, for public health and bedside nursing, and at the Warsaw School of Nursing. There is a file on Richard M. Pearce's report on "Medical Education in Poland," which was part of a survey of medical education throughout the world.

There is a small amount of material relating to grants in the social sciences especially for economics studies.

Arrangement note

Eight subseries as follows:

789 (no program letter; general material which does not fit into a particular program area)

789 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

789 C Nursing (nursing education, public health nursing)

789 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

789 J Public health demonstrations, local health units

789 K Health services (epidemiology, reform, public health administration, laboratories, vital statistics, and particularly sanitary engineering)

789 R Humanities and arts

789 S Social sciences

Sweden, 1924-1960

Physical Description: 3 Cubic Feet

Physical Description: 11 __Boxes __3 cubic feet

Scope and Contents note

The Rockefeller Foundation's interest in Sweden began in the mid-1920's but grants were not distributed until the 1930's. The major portion of the grants were distributed through four of Sweden's research institutions, especially the Karolinska Institute and the University of Stockholm. Grants were concentrated in the medical sciences and natural sciences. A large portion of these grants were made to support scientists who were forced to flee the political upheaval in Europe from the mid-1930's through the post-war years.

Arrangement note

Five subseries, as follows:

800 (no program letter; general material which does not fit into a particular program area)

800 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

800 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

800 R Humanities and arts

Sweden - Natural Sciences and Agriculture

Scope and Contents note

The Rockefeller Foundation's interest in Sweden began in the mid-1920's but grants were not distributed until the 1930's. The major portion of the grants were distributed through four of Sweden's research institutions, especially the Karolinska Institute and the University of Stockholm. Grants were concentrated in the medical sciences and natural sciences. A large portion of these grants were made to support scientists who were forced to flee the political upheaval in Europe from the mid-1930's through the post-war years.

Switzerland, 1922-1957

Physical Description: 2 Cubic Feet

Physical Description: 5 __ Boxes __ 2 cubic feet

Scope and Contents note

The earliest files in this series relate to medical schools in Switzerland, part of the Rockefeller Foundation's world-wide study of medical education in the 1920's. Later grants to the Universities of Basel, Berne, Geneva and Zurich deal mostly with purchase of equipment for research in the natural sciences. Material from the later 1940's and 1950's primarily documents travel grants.

Arrangement note

Five subseries, as follows:

803 (no program letter; general material which does not fit into a particular program area)

803 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

803 D Natural sciences and agriculture (research usually conducted in departments outside of medical schools, research in pure science, veterinary medicine or agriculture)

803 R Humanities and arts

803 S Social sciences

Lebanon, 1920-1967

Physical Description: 3.6 Cubic Feet

Physical Description: 12 __Boxes __3.6 cubic feet

Scope and Contents note

With the exception of a few general reports on medical education, The Rockefeller Foundation's interest was channeled entirely through the American University of Beirut. The Foundation gave support to the University's Medical School (1920-1967), to its Arabic Studies program (1948-1953) and School of Nursing (1927-1941). Although the files contain considerable material concerning the University's Department of Sociology, including a textbook and yearbooks, there is no record of any Foundation grant for its support during this period.

Arrangement note

Five subseries, as follows:

833 (no program letter; general material which does not fit into a particular program area)

833 A Medical sciences (research conducted in medical schools or medical research institutes, research directly applicable to the mental and physical health of human beings)

833 C Nursing (nursing education, public health nursing)

833 R Humanities and arts

833 S Social sciences
