## Biographical / Historical

The Rockefeller Foundation operated several field laboratories in the 1950s and 1960s, in conjunction with its virus research program centered at the Rockefeller Institute in New York.

The field office in Belem, Brazil, operated from 1954–1971 as a laboratory for the study of arthropod- or insect-borne viruses. Created in collaboration with the Servico Especiais de Saude Publica (Special Service of Public Health), the Belem virus laboratory sought to classify these viruses and examine the way they presented in humans and domesticated animals.

Ottis R. Causey was the first director of the virus laboratory. He and his wife, Calista Eliot Causey, established the laboratory in 1954, and Causey remained director until 1963. Causey received his Doctor

of Science degree in entomology, parasitology, and bacteriology from Johns Hopkins University. During his career with the Rockefeller Foundation, Causey devoted himself to the field of arbovirology. Under his tenure, the lab isolated about 1,600 viruses, of which 50 were found to be distinct viruses.

In the mid-1960s, the Rockefeller Foundation began to phase out its virus research program. The New York laboratory was incorporated into the Yale School of Medicine in 1964, becoming the Yale Arbovirus Research Unit, and several of the foundation's field laboratories integrated with universities or government research agencies. Robert E. Shope, M.D., directed the Belem laboratory from 1963 through June 1965, and was succeeded by John P. Woodall, who served until the field office's closing in 1971.

In the course of its existence, the Belem Virus Laboratory was responsible for isolating many viruses. Seeking to determine which viruses were present in their specific region, researchers studied blood samples from monkeys, mice, and humans. This isolation of viruses gave information about the prevalence of certain viruses and the conditions under which they were likely to occur. The laboratory established different methods for rapidly classifying viruses and new ways for monitoring the effects of the viruses on humans and animals. The laboratory made significant contributions to the knowledge of virus activity and lifecycles.

---

## Scope and Contents

---

The Belem Field Office records document the activities of the Belem Virus Laboratory from 1954 to 1970. Records consist of administrative and professional correspondence relating to laboratory operations, research activities, and communications and cooperation with researchers at other virus labs and research organizations, particularly in Latin America, Trinidad, and the U.S.

## **Processing Information**

Standard Processing by Kate Mockler, Summer 2011. Finding Aid entered into Archivists' Toolkit by Robert Battaly, December 2012.

## **Conditions Governing Access**

Records greater than 20 years old are open for scholarly research.

All Belem, Brazil Field Office records are open for scholarly research, except when noted.

RAC is unable to provide access to obsolete media and original digital media. In addition separated media may not yet have undergone stabilization procedures. When feasible, a digital surrogate may be created via special order. All applicable charges will apply. See RAC Head of Archival Services or RAC Head of Digital Programs for details.

## **Conditions Governing Use**

Researchers who visit the Rockefeller Archive Center are granted permission to examine archival material. Permission to cite, quote from, or publish material from the Center's collections must be requested separately by writing. See Archivists for details

A formal request for such permission should include the name of the collection(s) from which the relevant material is drawn; the title of the proposed article, book, or dissertation; the journal title for articles; the name of the publisher for books or the university for dissertations; and the anticipated date of publication

RAC users must abide by all applicable provisions of United States copyright law. Reproduction/duplication of archival items is routinely provided in accordance with "fair use". If the RAC does not hold copyright for an archival collection, or items within a collection, it is the users' responsibility to contact the copyright holder, or make a fair effort to do so, prior to publication.

## **Conditions Governing Use**

Rockefeller Foundation retains title, copyright and literary rights to all Rockefeller Foundation records in so far as it holds them.

## **Immediate Source of Acquisition**

The Belem Field Office records arrived at RAC during the initial transfer of Rockefeller Foundation records to Hillcrest, August 8-18, 1975.

The material was not officially accessioned at the time of transfer, and was retroactively accessioned by RAC as 2012:086.

## Physical Characteristics and Technical Requirements

---

Materials requiring specialized equipment for access (film, audio, video, slides) may be closed to research dependent on availability of the applicable equipment.

Brittle or damaged items, or materials otherwise in need of preservation care, may be closed to researchers at the discretion of the RAC Head of Archival Services/Head of Reference.
