## Biographical/Historical note

William Stein, whose work focused on the relationships between the chemical structures of proteins with their biological functions, was born in New York City in 1911. He was educated at Exeter Academy and Harvard University, graduating with a B.S. degree in 1933. It was while he was pursuing his doctoral studies at Columbia University that he first became associated with The Rockefeller University, then known as the Rockefeller Institute for Medical Research. He began as a volunteer in the laboratory of chemist Max Bergmann. After he graduated from Columbia in 1938, he was employed as an assistant in Bergmann's laboratory. In 1952, Dr. Stein became a member of the Institute and then later a Professor at the University. Although stricken with Guillain-Barre Syndrome in 1969, he continued to do his research up to the time of his death in 1980.

Over the years, Dr. Stein worked with colleagues to develop chromatographic procedures for the separation and quantitative determination of amino acids. These procedures proved very valuable

by facilitating the analysis of amino acids as well as other substances found in such biological fluids as blood plasma, tissue extracts, and urine. Dr. Stein collaborated extensively with his fellow Rockefeller colleague, Dr. Stanford Moore. In 1959, for the first time, Drs. Stein and Moore succeeded to decipher the complete chemical structure of ribonuclease. Together, they developed special scientific instrumentation related to their research, including automatic amino acid analyzers and automatic fraction collectors. These types of equipment later became commercially available and widely used.

In 1972, Drs. Stein and Moore were jointly awarded the Nobel Prize in Chemistry for investigations on the structure and activity of ribonuclease. They also shared a number of other awards. In 1964, they received the Electrophoresis and Chromatography Award from the American Chemical Society in recognition of the analytical methods they developed. That organization also presented them with the Theodore William Richard Medal in 1972 for their contributions to protein chemistry.

Dr. Stein frequently contributed to numerous scientific periodicals. He was chairman of the editorial committee of the American Society of Biological Chemists (1958-1961) and the editor of the Journal of Biological Chemistry (1968-1971). Dr. Stein was active in a number of scientific societies. In 1960 he was elected to the National Academy of Sciences and was named a fellow of the American Academy of Arts and Sciences.

A dedicated teacher, William Stein delivered, along with colleagues Lyman Craig and Stanford Moore, a lecture entitled "On Separating Things" at the Rockefeller Institute in 1961. This lecture series was repeated in Boston in 1962. The lectures, which focused on the techniques of physical and chemical separations on which much of modern biological science rests, were given to a specially selected group of high school students. At various points in his career, Dr. Stein was a Harvey Lecturer, a Phillips Lecturer at Haverford College, and an American-Swiss Foundation Fellow and Lecturer.

## Editorial Work, 1950-1975

Physical Description: 3.52 Cubic Feet

### Scope and Contents note

Includes correspondence and articles by other scientists.

### Arrangement note

Arranged in alphabetical order by name of body editing was done for.

Title/Description	Instances

## Audio Tapes, 1960-1980

Physical Description: 0.25 Cubic Feet

### Scope and Contents note

5 recordings including Memorial of Stein given by Prof. Moore and 4 lectures by Stein himself at various occasions.

**Arrangement note**

Arranged in chronological order.

Conditions Governing Access:**Conditions Governing Access**

RAC is unable to provide access to obsolete media, due to the specialized equipment necessary to facilitate playback. When feasible, a digital surrogate may be created via special order. All applicable charges will apply. See RAC Head of Archival Services or RAC Head of Digital Programs for details.
