### **Summary Information**

**Repository:** Rockefeller Archive Center

**Creator:** Rockefeller Institute for Medical Research

**Creator:** Rockefeller University

**Creator - aut:** Rudzinska, Maria A.

**Title:** Maria Rudzinska papers, Rockefeller University Faculty

**ID:** FA195

**Date [inclusive]:** 1952-1988

**Physical Description:** 0.38 Cubic Feet 2 boxes

**Physical Description:** 2 boxes

Language of the

Material:

**English** 

#### **Preferred Citation**

## Biographical/Historical note

Maria A. Rudzinska (1904-), a protozoologist and professor emeritus, began her association with The Rockefeller Institute for Medical Research/University in 1952. She worked as a guest investigator with William Trager in the parasitology laboratory. One of Maria Rudzinska's most significant finding was that malaria parasites feed on their host by endocytosis, engulfing large portions of the red blood cell cytoplasm into food vacuoles. She was also one of the first researchers to use electron microscopy in the study of parasitology. Rudzinska focused primarily on tokophyrya, studying its structure and physiology.

Dr. Rudzinska was born in Dalorova, Poland on January 4, 1904. She graduated from the Jagellonian University of Cracow in 1926 with an M.S. in biology and a Ph.D. in zoology in 1929. After emigrating to the U.S. in 1945, she worked as a research associate and instructor in Biology at New York University (1946-1952).
