Biographical/Historical note

George Uhlehbeck was born in Batavia, Dutch East Indies' (today Jakarta, Indonesia) in 1900 and died on October 31, 1988 in Boulder, Colorado. He received his Ph. D. degree in 1927 from the State University of Leyden in the Netherlands. While pursuing his graduate studies, he collaborated with Samuel A. Guidsmit in the discovery of the electron spin phenomenon. This concept of an electron's characteristic spin angular momentum about a specific axis has proved to be a cornerstone of basic atomic theory. Uhlenbeck's later research was primarily concerned with the statistical an kinetic theory of the equilibrium and non-quilibrium phenomena of physical systems.

Dr. Uhlenbeck joined the University of Michigan faculty in 1927 and was named professor of theoretical physics in 1939 and Henry Cahart University Professor of Physics in 1954. He served as professor of theoretical physics at the University of Leiden from 1935 to 1939. During World War II, he worked at the Radiation Laboratory at the Massachusetts Institute of Technology. In 1961 he joined the faculty of

Rockefeller University where he helped to establish the University's distinguished theoretical physics faculty. He retired from Rockefeller University in 1974 but continued his interest in physics, serving as both mentor to younger physicists and as an appraiser for articles submitted to scientific journals.

Among Dr. Uhlenbeck's many honors were the Max Planck Medal of the German Physical Society (1964), the National Medal of Science (1977) and the co-recipient of the Wolf Prize (1979). He received honorary degrees from Rockefeller University (1976), Notre Dame University (1953), Case Institute (1960), the University of Colorado (1968) and Yeshiva University (1969). He was elected a member of the National Academy of Sciences in 1955. He was also a member of the American Philosophical Society, the American Academy of Arts and Sciences, the American Association for the Advancement of Science and the American Physical Society, serving as president from 1959-1960.

Subject Files, 1958-1981

Physical Description: 2 Cubic Feet

Scope and Contents note

Subjects include Dr. Uhlenbeck's correspondence as president of the American Physical Society, material related to the controversy over Admiral Lewis B. Strauss' speech before the Society and documents pertaining to the American Institute of Physics and the Institute's efforts to establish a Center for the History of Physics.

Arrangement note

Arranged in alphabetical order by subject.
